GOVERNMENT OF MAHARASHTRA

REPORT OF
AGRICULTURAL CENSUS
1980-81

MAHARASHTRA STATE

PART I & PART II

DEPARTMENT OF AGRICULTURE

REPORT OF

AGRICULTURAL CENSUS

1980-81

MAHARASHTRA STATE

PART I & PART II

DEPARTMENT OF AGRICULTURE

PREFACE

Maharashtra along with other States in the Country, participated in the Agricultural Census 1980-81 sponsored by the Government of India. The previous Census was a Sample Census undertaken in 1976-77 as Government of India had desired to carry out an interim Sample Census to assess the changes in the structure of agricultural holdings, subsequent to the World Agricultural Census of 1970-71, due in part to vigorous implementation of the Land Ceiling Act. This is the Third Agricultural Census carried out by the Department of Agriculture and the second complete Agricultural Census, the first being held in 1970-71.

2. In the present Census data relating to the following essential items was collected :
   (i) Number and size of operational holdings
   (ii) Classification of the individual,joint and institutional holdings
   (iii) Tenancy and tenure
   (iv) Land utilisation
   (v) Source-wise irrigated area; and
   (vi) Area under crops both under irrigation and unirrigated conditions.

3. In addition, data had also been collected on the number of farmers growing different crops, number of farmers having irrigation facilities according to source of irrigation, number of wells in use and those fitted with pumps, number of wells not in use etc. The major feature of Census of 1980-81 related to data being collected separately for scheduled castes and scheduled tribes. The Deputy Commissioner (Agricultural Census) was reponsible for the census work. He was assited by a small Agricultural Census Unit created in the Directorate of Agriculture, at Pune. As in the last census, processing of data on Computer was undertaken by the Agricultural Census Unit itself Technical guidance of the experts of Regional Computer Centre, Pune, was fully taken for the required modifications in the computer programmes prepared by the experts of the National Institute of Training in Industrial Engineering (NITIE) for processing of data in the last census.

4. The collection of basic data for the census was entrusted to the Talathis / Patwaris of the Revenue Department. At one stage, assistance had to be taken of the Gram Sevaks. Despite initial reservations, the Talathis bore the burden of the field work involving retabulation of the data in the basic village records, in the format prescribed for Agricultural Census. There was some delay on account of reservations, the talathis had. Assistance had been taken of various technical agencies at the district and divisions for the training of the field staff for providing technical guidance and supervison of the field work.

5. Results of the Agricultural Census for the State and districts are presented in this Report. The report is divided into two parts. The first part contains six chapters. The first three deal with the historical background, organisational arrangements, concepts and definitions. Chapter IV deals with the analysis of the Agricultural Census results and the conclusions therefrom. The fifth Chapter deals with the suggestion for future census and gives a summary of the findings. Part-II of this document contains statistical tables giving the summary of the census data under different tables under a uniform format for the State, Region and District according to 14 size classes of holdings.

6. The Census shows that in 1980-81, there were 68.62 lakh operational holdings in the State, with a total operated area of 213.62 lakh hectares. The average size of the holdings was 3.11 hectares. As compared to the census of 1976-77, the number of holdings in the current census has increased by about 10.96 lakhs or about 19 per cent. The operated area has increased by 2.57 lakhs *i.e.* a nominal increase of 1.2 per cent over the last census figures. There has been considerable reduction in the average size of holdings as revealed in the 1980-81

census compared to 3.66 hectares during the census of 1976-77. 1980-81 census brings out the preponderance of small size holdings *i.e.* (those below holdings size of 2 hectares). Almost 51 per cent (as against 47 per cent in the previous census) comes under the category of small holdings, with an area of only about 15 per cent of the total area in the State, (11 per cent in the last census). Of 68.62 lakh holdings enumerated in the census, 14.35 lakh or nearly 20 per cent had irrigation facilities. The net irrigated area being 14.36 lakh hectares or about 8 per cent of the net cropped area.

7. As a result of the abolition of the Tenancy of Agricultutral land, the percentage of lands taken on rent for cultivation have considerably decreased. The total number of farmers taking land on rental basis was only 0.5 per cent. The percentage of farmers who own some of the land and also leased in some of the land for cultivation accounted for only 1.4 per cent; *i.e.* over 98 per cent of the farmers own the land they till.

8. For the first time census of scheduled castes and scheduled tribes holdings have been taken out separately during 1980-81 census. Of a total holdings of 68.62 lakhs, the number of holdings held by members of scheduled castes was 4.67 lakhs or about 6.8 per cent and those of scheduled tribes 4.13 lakhs or about 6 per cent. The total area operated by schedule castes was 9.56 lakh hectares or about 4.5 per cent and those of schedule tribes 12.99 lakh hectares or about 6.1 per cent of the total operated area.

9. The report contains details of the above featuring for the State, Region and Districts. These results are of considerable utlity not only to the Government department, but also to research workers, economists and those associated with agricultural planning and development. The results of the census will be of considerable help in policy formulation and assessment of the impact of different agricultural projects.

10. The conduct of census involved collection of statistical data for each parcel of land covering nearly 7 million land holdings in the State was a colossal task. The Talathis had been mostly entrusted with these responsibilities, did a good job despite some initial time lag. This is a commendable effort considering that this had to be done in additon to their normal duties. The senior Revenue Department officers *viz.* Secretary (Revenue), Commissioners, Collectors, Tahasildars, Revenue Inspectors, gave necessary support in getting the work done properly and I sincerely thank them. We would like to also thank the officers of the Rural Development Department in getting the census work completed. The officers and the staff of the Directorate of Economics and Statistics and those of the Statistical Wing of the Directorate of Agriculture rendered assistance in training of field staff and supervision of field work. I would like to express my sincere thanks to all these officers and field staff.

11. The Deputy Commissioner (Agricultural Census) was responsible for the Planning and organisation of the census. To begin with the post was held by Shri G.C. Shaligram, when this census programme was initiated. Shri D.T.Sawant held this post for about two years. From December, 1983 onwards, Shri B.C.Gogate held this post, and most of the work was completed during this time. Shri Khaire, Statistician has put in a great deal of effort in modification of the software and attending to the processing of data. I would like to place on record the excellent services rendered by these officers and the staff of the Agricultural Census Unit.

12. We are also grateful to the officers of the Government of India for guidance and help in the conduct of the Census.

Bombay 400 032
January, 1988

(K. RAJAN)
Agricultural Census Commissioner
and Secretary to Government,
Agriculture and Co-operation Department,
Mantralaya, Bombay 400 032.

REPORT ON AGRICULTURAL CENSUS 1980-81, MAHARASHTRA STATE

PART - I

CHAPTER I - INTRODUCTION

Historical background

1.1 Agricultural Census as such was first undertaken in the United States of America in the year 1840 in which an inventory of farm holdings was prepared for the first time. In this census holding-wise information about various aspects of agriculture including land use and crops grown etc. was obtained. This information was found to be very useful and hence in America, conduct of Agricultural Census became a regular decennial programme. As improvement in agriculture due to application of scientific technology, increasing tendency for mechanisation and new varieties crops with higher yield potentials, brought about rapid progress in Agricultural production, it was found necessary to have information on agricultural development at shorter intervals. Agricultural Census was, therefore, conducted there quinquennially since 1920.

1.2 In England, the Agricultural Census found its origin in Potato famine and cattle plague of 1866. Because of these calamities, economy of the country suffered and hence it became imperative to have detailed information about the structure of agriculture with this view the Agricultural Census was conducted which became a regular decennial programme. Subsequently looking to the experiences of America and England, some other countries also undertook Agricultural Census.

1.3 Agricultural Census however on a global scale was first attempted in 1924 by the then International Institute of Agriculture, Rome. In the first instance there was little response and in 1930 the census was conducted in 63 countries. Out of these, 46 countries carried out the Agricultural Census holding-wise, but in other countries different levels of geographical areas were units of enumeration of areas under cultivation. This Agricultural Census threw light on agriculture situation on an internationally comparative basis. This information was found to be very much useful in different countries and hence it was decided to have such type of Agricultural Census after every 10 years. However, the Agricultural Census could not be conducted in 1940 because of World War II. In 1945 the United Nations Organization came into the existence and thereunder the Food and Agriculture Organization (F.A.O.) was established. F.A.O. took over the activities of International Institute of Agriculture, Rome. Food and Agriculture Organization of the United Nations conducted the World Agrticultural Census for the first time in 1950 and the second and third censuses were conducted in the year 1960 and 1970. In 1950, 106 countries participated in World Agricultural Census programe thereafter number of participants went on increasing. The recent World Agricultural Census was conducted with 1980-81 as reference year.

Participation of India in Agricultural Census

1.4 India participated in the Agricultural Census programmes from 1950 onwards. In 1950 and 1960 Agricultural Census in India was conducted on Sample basis through the National Sample Survey Organisation. These censuses were found to be very useful and hence for the first time in India, Agricultural Census with 1970-71 as reference year was conducted on complete enumeration basis as a part of the World Agricultural Census programme. In 1976-77, again Sample Agricultural Census was conducted which was supplemented by Input Survey which included the Sample Survey of the use of different inputs like manures, fertilizers, seeds, insecticides, pesticides, etc. In 1980-81 again complete Agricultural Census, including Input Survey, was undertaken and in 1985-86 Agricultural Census is being undertaken, on Sample basis.

1.5 The basic object of the World Agricultural Census is to provide comprehensive information on agriculture at global level on a uniform and comparable basis. This is intended to provide good and useful data for various purposes. The chief among them being a comparative study of the experiences of agricultural development in different countries. Further for the individual nations holding-wise data became available at the lower levels of the administration. This also provided basic frame for carrying out Sample survey involving size-wise stratification. The data is useful in-

(1) organising a proper and rational distribution of inputs,
(2) formulating plans for further growth in agriculture and
(3) planning specific projects for agricultural development.

At the instance of GOI, Agricultural Census with 1980-81 as reference year was conducted in Maharashtra on complete enumeration basis. The results of this census for Maharashtra State are summarised in this report.

Contents of Report

1.6 The report is divided into two parts. Part-I summarises the findigs of the Census and Part-II gives the statistical tables of the results of the census at the State, Regional and district levels. Part-I is divided into six Chapters. Chapter-I gives the historical background of the Agricultural Census, certain information relating to the State and important partriculars relating to the 3rd Agricultural Census 1970-71, and 4th Agricultural Census 1976-77 as reference years. Chapter-II describes the particulars relating to the current Agricultural Census. The concepts and definitions are given in Chapter-III and the related annexures. The Chapter-IV gives analysis of the principal aspects of the Census data. Chapter-V contains the suggestions for the future censuses, based on the experience of the past 3 censuses, and the last Chapter-VI gives the summary of the findings.

Information is collected for SC/ST holdings also separately during the course of this 1980-81 Agricultural Census, and it is being published as a supplement to this report.

Methodology, Scope, Organisation and Findings of the last Census 1970-71 and 1976-77

1.7. The Agricultural Census 1970-71 was conducted on complete enumeration basis wherein all land holdings of the State were enumerated and the data were collected for the selected items mentioned in the following paragraphs. As the data required for the census were mostly recorded in the village revenue forms, the census data were collected by way of retabulation of the information already contained in the basic revenue records.

The Agricultural Census 1970-71 was restricted to the collection of the data relating to the following essential items.

(1) Number and size of each operational holdings,
(2) Classification of individual and joint holdings,
(3) Tenancy and tenure,
(4) Land utilization,
(5) Sourcewise irrigated area and
(6) Area under different crops (Irrigated and unirrigated).

1.8 In 1976-77 census, the information was collected on Sample basis. However, complete census of all the agricultural holdings in the State was conducted in respect of two items viz. number and size *i.e.* area of operational holdings classified according to individual, joint and institutional holdings. In Sample Agricultural Census, besides number and size of holdings referred to above, information on the following items was collected in each of the holdings in the selected villages of the Sample Census which was conducted in the random sample of 20% villages in the State *i.e.* 7693 villages.

1.9 During the Agricultural Census 1976-77 the information was collected in respect of the following :-

(1) Tenancy and tenure,
(2) Land utilization,
(3) Sourcewise irrigated area and
(4) Area under different crops grown (irrigated and unirrigated)
(5) Number of wells in use and not in use and whether fitted with a pump etc.

Along with the Sample Census 1976-77, Input Survey for collecting data on the use of major agricultural inputs like seeds, manures, fertilizers, insecticides, pesticides, etc. so also other items like multiple cropping, livestock, agricultural implements owned by the selected farmers were collected.

Organisation

1.10 The Secretary (Agricultural) of the Government of Maharashtra was nominated as State Agricultural Census Commissioner. He was assisted by an Officer designated as Deputy Commissioner (Agricultural Census). The Deputy Commissioner (Agricultural Census) was appointed in the Directorate of Agriculture at Pune to plan and organise the census, attend to co-ordination aspects and also to draft the report of the Agricultural Census. A small Census Cell was created with the above Officer as its head in the Directorate of Agriculture, Pune for rendering assistance in the above work. The field work was entrusted to the Talathis/Patwaris and their work supervised by higher revenue officers. In each district, one Senior Deputy Collector in the Collectorate designated as Assistant Agricultural Census Commissioner (field operation) was entrusted with the executive responsibility of geting the census work done by the revenue staff. The Deputy Chief Executive Officer of Zilla Parishad was also co-ordinated so as to have proper control over the work carried out by the Gramsevaks, Extension Officers (Stat) and Extension Officer (Agricultural) in the Zilla Parishad. The Gramsevaks were assigned with the Agricultural Census field work and they were asked to help the talathis in

retabulating the data in the Agricultural Census prescribed forms. The District Statistical Officers of the Directorate of Economics and Statistics were allotted the responsibility of looking after the technical aspects of the census in each district. The Extension Officers (Stat) in the Panchayat Samiti were entrusted with the work of scrutiny of census data and checking the village level aggregation of census figures.

1.11 For undertaking the mechanical tabulation of the data collected in the Agricultural Census, another small cell was created. In this Cell Statistician (A.C.Tab.) in M.A.S.Class-I was appointed who was in-charge of the work relating to the Mechanical Tabulation of the data.

The State Advisory Committee was appointed consisting of senior Officers of the concerned Departments in order to review the progress of Census work from time to time and to remove any bottlenecks in the smooth conduct of Agricultural Census.

Finding of the Census 1970-71 and 1976-77

1.12. The important findings of the Agricultural Census of 1970-71 were as follows :

(1) In 1970-71, there were 49.51 lakhs operational holdings in Maharashtra with a total area of 211.79 lakh ha. giving an average area of 4.28 ha. per holding. 97.3 per cent holdings were operated individually and the rest jointly. The total area of land under joint holdings was 7.15 lakh ha. (3.4 per cent of the total operated area).

(2) There were 4.27 lakh (8.6%) plural holdings having their components scattered in 2 or more villages within the same tahsil.

(3) Due to abolition of agricultural land tenancy by the Tenancy Act of 1957 and tenancy being permitted only in a few specific cases, hardly 5% of the land in the State was rented out. The remaining 95% of the total operated area was owned by the cultivators.

(4) 92% of the holdings were owner operated *i.e.* the farmers owned the entire land they operated, 5% were partly owned and partly rented and the rest of 3% of them consisted of land entirely taken on lease.

(5) The average sizes of the holdings of the 3 categories referred to above were 4.2, 6.9 and 3.2 ha. respectively. This shows that pure tenants had holdings of a smaller average size.

(6) The number of small holders *i.e.* those having holdings of the size below 2 ha. or 5 acres was appreciable in the State being 43% but the area covered by them was quite small being only 9% of the total operated area in the State. The relative proportion of small holders was large in Thane, Kulaba (now Raigad), Ratnagiri, Satara, Kolhapur and Bhandara districts where it was above 60%. The average size of holdings in these districts was consequently small, being 2 to 2.8 ha. The proportion of small holdings was relatively low *i.e.* less than 40% in the predominantly millet and cotton growing districts.

(7) About 24% of the holdings in the State (11.91 lakh) had irrigated land, but the net irrigated area was only 12.37 lakh ha. or 7.1% of the net sown area, 1.73 lakh holdings were

wholly irrigated and the remaining 10.19 lakh holdings were partly irrigated. The overall average irrigated area per irrigated holding was 1.04 ha.

(8) The intensity of irrigated cropping measured by the ratio of gross irrigated area to the net irrigated area was 110% *i.e.* only 10% of the irrigated area was cropped more than once and its proportion to the net cropped area under irrigation was nearly the same for bigger and smaller farmers.

Census of 1976-77

1.13 In 1976-77 there were 57.64 lakh operational holdings with the total area of 211.05 lakh ha. giving an average area of 3.66 ha. per holding. The number of individual holdings and joint holdings was 97.6 and 2.3% respectively of the total and only 0.1% were institutional holdings. The operated area under the three categories of holdings formed 96.7%, 2.8% and 0.5% respectively of the State total.

2. The total numbner of holdings covered by the Sample Agricultural Census was 57.58 lakh with operated area of 209.89 lakh ha. after excluding institutional holdings and the operated holdings of Pune city tahsil which were not covered by the Sample Survey.

3. Hardly 3% of the land in the State was taken on rent by the farmers. The remaining 97% of the total area was owned by the cultivators. This was due to the implemention of the Abolition of Agricultural land Tenancy Act of 1957.

4. 96% of the holdings were owner operated. About 3% of the holdings were partly owned and partly rented and only about 1% of them were rented entirely or taken on lease. The average size of the holdings of the 3 categories are referred to above were 3.06, 5.57 and 3.13 ha. respectively. This shows that the pure tenants had holdings of smaler average size.

5. The number of small holder *i.e.* having holdings of less than 2 ha. was appreciable in the State being 46% of total holdings. The area covered by these holdings was quite small being hardly 11% of the total operated area in the State. The relative proportion of the number of such small holdings was much higher in the paddy growing districts of the State, particularly in Thane, Kulaba (Raigad), Ratnagiri, Kolhapur, Satara and Bhandara districts were it ranges from 63 to 75%. The average size of the holdings in these districts was smaller being 1.78 to 2.65 ha. The proportion of small holdings was relatively low *i.e.* 40% or less in the predominantly millet and cotton growing districts.

1.14 In case of large holdings *i.e.* 10 ha. and above, their proportion was only 7% of the total number of holdings in the State. The total operated area under them was however, relatively higher,about 31%.

6. Out of 57.58 lakh holdings of the State, 2.44 lakhs (about 4%) were wholly irrigated and 10.6 lakhs (18%) were partly irrigated and partly unirrigated. Thus in all 13.05 lakh holdings in the State had irrigated land. The net irrigated area was 13.32 lakh ha. (7.8% of the net cropped area) the overall average irrigated area per irrigated holdings was 1.02 ha. It is noteworthy that less than 23% of the holdings have irrigated facilities and consequently more than 77% did not have irrigation facilities.

Adminsrative divisions and districts

1.15 Maharashtra consists of 30 districts and is divided into 6 administrative divisions *viz.* Konkan, Nasik, Pune, Aurangabad, Amravati and Nagpur. The Konkan division comprises of 5 districts, *viz.* Bombay Suburban or Greater Bombay, Thane, Raigad, Ratnagiri and Sindhudurg. These 5 districts are the coastal districts which constitute the Konkan region. Nashik division comprises of 4 districts, *viz.* Nashik, Dhule, Jalgaon and Ahmednagar. The Pune division comprises of 5 districts *viz.* Pune, Satara, Sangli, Solapur and Kolhapur. These 3 divisions together comprising of 14 districts constitute the Western Maharashtra region. The Aurangabad division, also called as Marathwada region, comprises of 7 districts *viz.* Aurangabad, Jalna, Parbhani, Beed, Nanded, Latur and Osmanabad. These districts belonged to the former Hyderabad State. The Amravati division comprises of 4 districts *viz.* Buldhana, Akola, Amravati and Yavatmal. These districts are the Ex-Berar districts. The Nagpur division comprises of Wardha, Nagpur, Bhandara, Chandrapur and Gadchiroli. The above mentioned 5 districts are the Ex-Central Provinces districts of the former Madhya Prant.

Physical features

1.16 The State of Maharashtra, formed on the 1st May 1960, is the third largest State in India in respect of both area and population. The geographical area of the State is 3.08 lakh Sq.kms. which is about one-tenth of the area of the Indian Union. The total pupulation of the State in 1981 was 62.78 million. Maharashtra State forms a major portion of the peninsular India, having a sea coast of 720 km. as the western border of the State. It lies between 16.4" and 22.1" North latitudes and between 72.6" and 80.9" East longitudes. It is bounded by the Arabian sea on the West by Gujarat and part of the Union Territory of Goa *viz.* Dadra and Nagar Haveli to its North-West, Madhya Pradesh in the East and North, Andhra Pradesh in the South-East and Karnataka and Union Territory of Goa in the South.

1.17 The main features of Maharashtra's topography are the famous North-South range of the 'Western Ghats' called the 'Sahyadri' running almost parallel to the sea coast on the Western and the East-West ranges of hills called the 'Satpuda' situated on the Northern border of the State. There are also smaller hilly ranges and high lands to the North of Nashik district called the Satmala ranges, with their continuation in the Balaghat range which goes right upto the Eastern boundary of Vidarbha. The Eastern Ghats divide the State into two distinct natural parts called the Konkan and the Deccan Plateau. The Konkan is a long and narrow hilly undulating region of 40 kms. to 60 kms. width, lying between the Arabian Sea and the Western Ghats. It is located mostly near the sea coast. Over the Eastern side of the Western Ghats, stretch the long and broad plains or table lands, well recognised as the Deccan Plateau at an elevation ranging from 450 to 610 metres above the sea level. The plateau is intercepted by Satpuda, Balaghat and Mahadev hills which give rise to three fertile river basins called the Tapi, Godavari and Krishna basins. The names are derived from the major rivers flowing through them.

Crop Season

1.18 There are only two principal crop seasons in Maharashtra State, namely, the kharif season commencing with the South-West monsoon in June followed by the rabi season following in the winter. Crops are raised in the summer season also but on an extremely restricted scale due to the meagre irrigation facilities available after meeting the requirements of long duration crops like sugarcane, banana other horticultural and vegetable crops.

Agro-Climatic Zones

1.19 The climate and soil of Maharashtra vary widely. The annual precipitation ranges from less than 500 mm in parts of Ahmednagar district to more than 3000 mm in Ratnagiri district. Soil also varies in structure and content. Western Maharashtra has high rising mountains on the Western side with a plateau spread over for the remaining part having soils of varying depths and fertility. Based on the soil and rainfall conditions, the State has been divided into nine broad Agro-climatic zones. The detailed description of these zones is given in the Research Bulletin-21 of the Department of Agriculture, entitled- "Broad Soil Zones of Maharashtra". The zones generally cover parts of two or more districts and of even tahsils. As area statistics are maintained according to administrative units only, zonewise information regarding land use, area under crops *etc.* is not readily available.

Pupulation

1.20 The estimated State pupulation as on 1st July 1977 was 570.4 lakh. The same increased to 627.8 lakh in 1981 as per the pupulation Census 1981. This shows that the pupulation increased by 57.4 lakh or 10% during the period of 4 years from 1977 to 1981.

The districtwise particulars are given in Annexure-1.

Land Use

1.21 The entire land in the State has been cadastrally surveyed and is under the reporting system. The land use pattern under the nine-fold classification adopted in the Annual Season and Crop Report as well as classification of these in broad groups (I to VI) adopted in the census is presented in the Table No.1.1 below for the country and the State based on the official statistics. The total gross area of the State is about 1/10th of the corresponding area in the country. The proportion of net sown area in the State and to some extent that of the "area of land not available for cultivation" are markedly different from the corresponding proportion in the country as a whole. Thus the proportion of the net sown area so the geographical area in the State is relatively large as compared with that in the country. On the other hand, the percentage of the area covered by forests, area under non-agricultural use, barren and uncultivated land in the State are smaller than those of the corresponding items of the land use in the country.

Average area under different categories of the land utility in the State during the last census (1976-77) period and the current census *i.e.* 1980-81 is given in Table No.1. 2 below. It is seen that the net area under cultivation increased from 182.05 lakh ha. in 1976-77 to 182.99 lakh ha. in 1980-81. The area not available for cultivation has increased from 27.09 lakh ha. to 27.65 lakh ha. in 1980-81.

Cropping Pattern

1.22 The average area under principal crops during 1976-77 and 1980-81 are given in Table No.1.3 below.

As stated earlier, the net sown area has slightly increased during these two censuses. However, the increase in gross cropped area is from 197.88 lakh in 1976-77 to 201.33 lakh ha. in 1980-81, an increase of 3.45 lakh ha. over 1976-77. Amongst the individual crop area (than that of during 1976-77) under the principal crops such as Rice, rabi jowar, sugarcane, cotton has incresed while area under wheat, bajra and groundnut decreased in 1980-81 as compared to the

area under corresponding crops in 1976-77. The decrease in area under groundnut was considerable.

TABLE NO. 1.1

Item of land use	Area under land use in lakh hectares in 1980-81			
	Maharashtra State		Indian Union	
	Area	Proportion of Col.2 to total reporting area.	Area	Proportion of Col.4 to total reporting area.
1.	2.	3.	4.	5.
I) Land not available for cultivation				
		Percentage		Percentage
(a) Forests	53.09	17.26	674.21	22.17
(b) Area under non-Agricultural use	10.32	3.36	194.52	6.40
(c) Barren and uncultivated land	17.33	5.64	201.67	6.62
Total	80.74	26.26	1070.40	35.19
II) Other uncultivated land excluding fallow land				
(a) Permanent pastures and other grazing lands	15.75	5.12	120.08	3.94
(b) Land under Misc. crops and groves not included in the net area sown	1.86	0.60	34.94	1.15
Total	17.61	5.72	155.02	5.09
III) Other fallows	8.02	2.61	98.17	3.23
IV) Culturable waste	9.93	3.23	167.28	5.50
V) Current fallows	8.29	2.69	148.10	4.87
VI) Net sown area	182.99	59.49	1402.70	46.12
Total reporting area	307.58	100.00	3041.67	100.00

Table No. 1.2

Land use pattern in Maharashtra in 1976-77 and 1980-81

	Land use	1976-77	1980-81
1)	Total reporting area ...	307.58 (100)	307.58 (100)
2)	Forests ...	53.27 (17.4)	53.09 (17.3)
3)	Not available for cultivation (i.e. land under non-agricultural use, barren and uncultivable)	27.09 (8.8)	27.65 (8.9)
4)	Other uncultivated land excluding fallow land		
	(a) Permanent pasturs and other grazing lands under miscellaneous tree crops not included in net area sown.	17.87 (5.8)	17.61 (5.7)
	(b) Cultivable waste ...	9.65 (3.2)	9.93 (3.3)
5)	Fallow lands		
	(a) Current fallow ...	9.20 (3.0)	8.29 (2.7)
	(b) Other fallows ...	8.13 (2.6)	8.02 (2.6)
6)	Net area sown ...	182.05 (59.2)	182.99 (59.5)

TABLE NO. 1.3

Area under principal crops in Maharashtra during the two census periods

	Crop	Area in lakh hectare	
		1976-77	1980-81
1)	Rice ...	14.63 (7.4)	15.04 (7.3)
2)	Wheat ...	11.69 (5.9)	10.79 (5.4)
3)	Kharip Jowar ...	29.93 (15.1)	29.98 (14.9)
4)	Rabi Jowar ...	32.90 (16.6)	34.40 (17.1)
5)	Bajri ...	17.30 (8.7)	17.09 (8.5)
	Total Cereals ...	110.05 (55.6)	112.32 (55.8)
	Total Pulses ...	29.05 (14.7)	28.04 (13.9)
	Total Foodgrain ...	139.10 (70.3)	140.36 (69.7)

TABLE No. 1.3 (Contd.)

Crop		Area in lakh hectare	
		1976-77	1980-81
6) Sugarcane	...	2.98 (1.5)	3.17 (1.6)
7) Cotton	...	21.62 (10.9)	26.67 (13.3)
8) Groundnut	...	9.05 (4.6)	7.12 (3.5)
Gross cropped area	...	197.88	201.33

Note :- Figures in bracket are percentages based on the corresponding gross cropped area.

The gross cropped area in the State increased during the period under reference from 197.88 lakh hectares in 1976-77 to 201.33 lakh hectares during 1980-81 i.e. by 4.55 lakh hectares. The total area under cereals also registered on an increase of 2.27 lakh hectares, but the area under pulses declined by 1.01 lakh hectares, thereby leading to an marginal increase of only 1.26 lakh hectares in the total area under foodgrains.

Irrigation

1.23 Eventhough a few large scale irrigation works like Krishna canal, Khadakwasla, Bhatgar, Bhandardara, Chaukapur, Darna, Jayakwadi etc. are built for canal irrigation and water from a few tanks in Vidarbha region is available for irrigation, the level of development of irrigation in Maharashtra is far below that of most of the other States in the country.

1.24 In the last 5 years *i.e.* from 1975-76 to 1980-81, the net irrigated area in the State increased by 0.14 lakh hectares *i.e.* about 1%. Considering the different sources of irrigation it is seen that well is still the major source of irrigation covering 57% of the net irrigated area. The net area irrigated by canals has gone up by 0.65 lakh hectares from 1975-76 to 1980-81 and more than 24% of the net irrigated area gets irrigation water from canals. The table below gives the progress made in the sourcewise irrigated area during the above period of 5 years.

TABLE

Sourcewise Irrigation

Source	Net irrigated area in '000' Hectares		
	1975-76	1980-81	Percentage increase in 1980-81 over 1975-76
1. Canals	378 (21%)	443 (24%)	(+) 17.2
2. Tanks	232 (13%)	210 (12%)	(-) 9.5
3. Wells	1084 (60%)	1038 (57%)	(-) 4.2
4. Other sources	107 (6%)	124 (7%)	(-) 15.9
	1801 (100%)	1815 (100%)	(+) 0.8

Maharashtra is thus seen from what is stated above, to be largely a dry region with proportionately much higher area under dry cultivation than in the country as a whole. Due to wide variation in soil and climate there are as many as 9 Agro-climatic zones. Consequently there is a wide spectrum of cropping pattern.

CHAPTER II - (AGRICULTURAL CENSUS 1980-81)

Need for the present Census

2.1 The National Commission on Agriculture had, in its report, emphasised the need for conducting periodically Agricultural Censuses with operational holding as the unit of enumeration in view of its importance for taking decisions regarding Agricultural development. Planning Commission had also underlined the need for conducting the Agricultural Censuses periodically for formulation of Five Year Plans. The Regional Conferences on Agricultural Census organised by the Government of India during 1973, considered the above recommendations and suggested the conduct of Agricultural Census at an interval of five years, linking the census operations with the Five Year Plan formulation. Accordingly, the Government of India decided to carry out a Sample Agtricultural Census with 1976-77 as the reference year, *i.e.* 6 years after 1st complete Agricultural Census held with 1970-71 as a reference year. The next World Agricultural Census was due in 1980-81. Accordingly, Government of India decided to conduct Agricultural Census with 1980-81 as reference year as per D.O.letter No. 11011/1/80-ACU dated the 15th October 1980. Accordingly, the State Government issued orders sanctioning the Scheme on 5th December 1980. Administrative approval of the Government of India for the implementation of the Agricultural Census Scheme in the State of Maharashtra was received under their letter No.11014/2/81-ACU, dated 23rd February 1981. Entire expenditure on the scheme was to be borne by the Government of India except that on printing and stationery, telephone and postage, residential accommodation *etc.*

Technical Programme

2.2 Under the current Agricultural Census, following activities were undertaken as a part of the All India programme finalised by the Central Ministry of Agrticulture.

(A) Complete Census of all agricultural holdings in the State (*i.e.* covering all the revenue villages) according to 14 size classes. The information was collected on the following aspects.

(i) Number and size (*i.e.* area) of operational holdings, classified according to individual, joint and Institutional holdings.
(ii) Land utilisation.
(iii) Area under irrigated and unirrigated crops.
(iv) Cropwise and sourcewise area irrigated.
(v) Tenancy and tenure.
(vi) Number of wells in use and not in use, in case of farmer and whether fitted with pumps.

(B) *Input Survey*

2.3 Input Survey in the random Sample of 7% of the villages in each of the districts with 20 holdings per village for collecting data on different Agricultural Inputs. The unit of enumeration adopted for the above programme was an operational holding (as defined in next Chapter).

2.4 In Input Survey the data on use of major agricultural inputs like seed (hybrid and high yielding varieties) manures, fertilizers and pesticides *etc.* as also other items like multiple

cropping, livestock, agricultural implements owned by the selected farmers and credit facilities availed by them. The results of the Input Survey are summarised in a separate report.

2.5 (C) Separate enumeration and estimation of the holdings belonging to Schedule Caste and Schedule tribes in Agricultural Census and Input Survey respectively, was also carried out.

Methodology

2.6 As the information required under the Agricultural Census was already contained in the village revenue records, the collection of census data was done, as in the previous censuses of 1970-71 and 1976-77 by the method of retabulation of the information from the village records.

2.7 The methodology used in the previous census of 1976-77 was adopted, with the resident cultivators approach. In doing so, even if an operator had no land in the village of his residence, his holding was still included in that village only. The tahsil was taken as the boundry while accounting for operated area by the plural holders.

Organisation

2.8 The Secretary to Government, Agriculture and Cooperation Department, Bombay was nominated as the State Agricultural Census Commissioner and was assisted by the Deputy Commissioner (Agricultural Census) posted in the Directorate of Agriculture, Pune. The responsibility of planning and organising the census, attending to the co-ordination aspects and also drafting the technical report on the Census, was entrusted to the Deputy Commissioner (Agricultural Census). A small cell was created with the above Officer as its head in the Directorate. The Deputy Commissioner (Agricultural Census) was assisted by the Statistician (Agricultural Census) in the discharge of the above responsibility.

2.9 In addition, one post of Officer on Special Duty was created to organise the fileld work of Agricultural Census and see that the field work is carried out properly and timely. Additional staff for the Mechanical Tabulation of the Census data was also made available in due course of time for handling the Mechanical Tabulation work in respect of Agricultural Census.

2.10 The Divisional Assistant Statistician of the State Department of Agriculture and the District Statistical Officers of the Directorate of Economic and Statistics rendered assistance in imparting training to the field staff and to the supervisory staff at district and tahsil levels. The help of Block Statistical Assistants of the Panchayat Samities and Statistical Supervisors of the State Department of Agriculture were taken for the supervision of the field work and scrutiny of the data collected in the prescribed registers.

2.11 The present census, as alreay mentioned earlier, was based on the data available in the Land records. These land records in the State are maintained by the Patwaris/Talathis at the village level under the Supervision of Revenue Inspectors for group of villages called a revenue circle- within the tahsil, by the Tahsildar at the tahsil level and the Collector at the district level. In view of the administrative set-up, the field work and its supervision were mainly entrusted to the Revenue agencies. Because of the heavy nature of work and demands from the field workers the help of Gramsevaks of the Panchayat Samiti was also taken in

retabulation of the data. However, this brought in some more discrepancies because of the fact that the Gramsevaks were not fully conversant with the details recorded in the village records maintained by the Patwaris/Talathis and the work carried out by the Gramsevaks was required to be rectified and corrected wherever necessary with the help of Patwaris/Talathis. The primary data of the agricultural holdings of each village was compiled by the talathi and the Gramsevaks in the precribed registers and schedules. This work was supervised and co-ordinated by the higher revenue and Zilla Parishad officers by the Revenue Inspectors at the circle level and Tehsildars and Block Development Officers at the tahsil level.

2.12 In each district one (Senior) Deputy Collector in the Collectorate mostly Resident Deputy Collector was designated as Assistant Agricultural Census Commissioner and was entrusted with the responsibility of getting the census work completed in time and co-ordinating the census work in the district on behalf of the Collector. The Tahsildars were designated as Tahsil Agricultural Census Officers and Revenue Sub-Divisional Officers were also associated with the supervision and co-ordination of the census work in their respective sub-divisions, particularly for speding up completion of the field work. The Block Statistical Assistants of the Panchayat Samiti were assigned the work of scrutiny of the final returns and checking of the aggregations of the census data at the village level.

2.13 In order to supplement the quantum of supervision carried out by the Revenue Officers and to check certain intricate technical details relating to the census enumerations, the Statistical Officers and Supervisors of the Agriculture Department in the district and District Statistical Officers of the Directorate of Economics and Statistics were also assigned the supervision programme.

Appointment of State Advisory Committee

2.14 As was done in the last census, at the instance of Government of India, a State Advisory Committee was appointed for ensuring smooth, efficient and timely execution of the Census programe. The Comittee consisted of the following members who also rendered assistance in the various aspects of the census programme.

(1) Agricultural Census Commissioner and Secretary to Government, Agriculture and Co-operation Department	Chairman
(2) Secretary to Government, Revenue and Forests Department.	Member
(3) Secretary to Government, Rural Development Department.	Member
(4) Deputy Secretary/Under Secretary, Agriculture and Co-operation Department.	Member
(5) Director of Agriculture.	Member
(6) Director of Economics and Statistics.	Member
(7) Deputy Commissioner (Agricultural Census)	Member Secretary
(8) Director, Printing and Stationery, Bombay	Member

2.15 The Committee met from time to time and took decisions relating to specific allotment of the responsibilities to the different agencies concerned and for reviewing the progress of census in all its aspects. The bottlenecks in the smooth implementation of the census scheme and difficulties encountered were also discussed and removed as and when they arose. This was particularly helpful in view of certain peculier problems faced in the conduct

of the census, particularly due to unwillingness on the part of the Patwaris/Talathis to attend to the census work,activities of conflicting priorities to which the field staff had to be diverted *etc.*

Preparatory work done prior to the Census

2.16 The following preliminaries were completed prior to the commencement of the main census :-

(i) Updating of land records- Government (Revenue and Forests Department) issued necessary instructions to the district Collectors to make necessary arrnangements for updating the land records. Special emphasis was laid on -

(a) bringing upto date the entries in the relevant village land records, *viz.* mutation registers, tenancy registers, khata registers *etc.*

(b) carrying out the crop inspection more carefully and in time.

(c) recording in the khasra (Village Form No.VII-XII) the name of the actual tiller of the lands with his tenurial status in relation to the land cultivated.

(d) correct recording of irrigation statistics and source of irrigation.

For this purpose, the year 1980-81 was declared as "Land Records Year". Necessary follow-up action was taken for implementing the Government orders right upto the village level and reviewing the action taken at the monthly meetings of talathis at the tahsil level.

2.17 (ii) *Orientation meetings* :- Divisional meetings of the Senior Officers were held for giving necessary orientation training relating to the current census and in particular for explaining :-

(a) the methodology to be adopted in the census and action to be taken in bringing the records upto-date,

(b) the basic care to be taken in carrying out crop inspections during 1980-81,

(c) the types of mistakes and deficiencies normally noticed in the crop inspection registers and other relevant records maintained by the talathis,

(d) the deficiencies and lapses noticed in the previous Agricultural Census as also the precautionary steps to be taken for avoiding the recurrence of the same in the current Agricultural Census.

2.18 The above meetings were attended by the Assistant Agricultural Census Commissioners, Revenue Sub-Divisional Officers, Deputy Chief Executive Officers of Zilla Parishads, Divisional Assistant Statisticians of the Agriculture Department and the District Stastistical Officers of the Directorate of Economics and Statistics.

2.19 The Zilla Parishad officials were closely associated in view of the fact that the Block Statistical Assistants in the Panchayat Samities had been entrusted with the important work of the scrutiny of the census data besides the field work of Input Survey.

With the adoption of resident cultivators' approach, suitable measures were taken for the proper differentiation between the resident and non-resident cultivators in each village and compiling the data of their holdings separately.

2.20 Suitable steps were also taken to identify the non-agricultural holdings and exclude them from the list of holdings prepared for each village.

2.21 Suitable schedules were introduced for retabulation of the data in village records and checking the village level aggregates of the census statistics so as to ensure the completeness of the census coverage.

Schedules prescribed for collecting Census data

2.22 As explained earlier, the data for the complete Agricultural Census were to be

collected by retabulation of the information compiled in the village records. For this purpose, few schedules were prescribed so as to streamline the work of compilation of the census data in the light of experience gained in the previous censuses. The schedules prescribed were as under :-

	Register/Schedule		Information to be collected
1)	Register A	...	Parcelwise details of ech complete holding of each resident cultivator in the village.
2)	Register B	...	Parcelwise details of each incomplete (part) holding of the resident cultivators in the village.
3)	Register C	...	Parcelwise details of each incomplete (part) holding of the non-resident cultivator in the resident cultivators in the village under enumerations.
4)	Register D	...	Holdingwise abstract of each completed holding in respect of resident cultivators according to different size classes of holdings.
5)	Green Schedules	...	Parcelwise details in respect of each incomplete holding (as taken from Register C) for being communicated to the concerned talathi, in whose jurisdiction the concerned cultivator resided.

Printing of Schedules

2.23. The programme for printing of Agricultural Census and Input Survey schedules was finalised in consultation with the Director, Government Printing and Stationery, Bombay, and the printing was got done in Government Printing Presses. As the field staff could not assess properly, the requirement of cetain schedules and registers recurring demands for additional forms and registers was received and had to be fulfilled at a very short notice and hence additional copies of required census forms had to be got printed as additional requirements. The volume of schedules required is as under :-

	Registers			No.of copies printed
1.	Register A	...	...	60,000
2.	Register B	...	...	70,000
3.	Register C	...	...	67,000
4.	Register D	...	...	60,000
5.	Green Schedules	...	...	6,00,000
6.	Listing Schedules	...	...	1,50,000
7.	Instruction Books	...	...	15,000
8.	Register E	...	...	9,000

Arrangements for processing of data

2.24 A Mechanical Tabulation Cell was created in the Agricultural Census Scheme under the Deputy Comissioner (Agricultural Census) for attending to the processing of the data collected in the main census and Input Survey. This Cell was headed by the Stastistician (Mechanical Tabulation) who was responsible for co-ordinating and suprvising pre-punch scrutiny of the returns, punching of the data and computerisation of the same for obtaining the out-put tables. He was assisted by 2 Assistant Statistians and other subordinate staff who were engaged in the work of scrutiny of the schedules, coding of the data, transfer of the data to card design schedules, updating of the data of the registers etc. This staff also attended to the preparation of the test data, carrying out validation checks, testing of the programmes, transfer of the data on magnetic tapes and final computerisation of the data. The Regional Computer Centre, Pune accepted the responsibility of developing the computer programmes and the entire

processing of the data was carried out under the technical guidance of the concerned Officers of the Regional Computer Centre, Pune. The Statistician (Mechanical Tabulation) and Assistant Statisticians were closely associated with this work of Mechanical tabulatiuon.

2.25 In order to streamline the process of transfer of data to punch cards, it was first necessary to subject the data to a careful scrutiny, checking for internal consistency and correctness of the aggregation, the data were then transferred to a special card design schedule so as to ensure speedy and accurate punching. Because of the delay in the field work of Agricultural Census, it became essential to compile urgently the information to be given in the Census Table No.1. A separate schedule in the form of 'E' register was got printed and completed with the help of Circle Inspectors/Officers. This schedule was scrutinised at taluka level and the information was compiled with the help of District and Divisional Statistics staff and on the basis of information collected in 'E' registers, provisional table No.1 was prepared as required by the Central Ministry of Agriculture.

Training

2.26 A booklet containing detailed and self-explanatory instructions for the conduct of the census was prepared in Marathi, covering every aspect of the census including concepts and definitions, checks to be applied, procedure to be adopted for collecting census data, right from the listing of the holdings to the final stage, with suitable examples. Each field worker and supervisor was supplied with a printed copy of the booklet. In addition, separate instructions relating to the supervision of the census work were also given for the guidance of the supervisory agencies.

2.27 The training of workers at all levels was a major aspect of the census operation. The organisation of the training of thousands of field workers involved in the Agricultural Census in a short period was a huge task. A two-tier training programme as below was organised :-

(a) Divisional level for officers who were to impart training to the field staff along with other higher officers associted with the supervison and guidance of the census programme.

(b) Another one at the tahsil level for training the field and supervisory staff at that level

2.28 The divisional orientation meetings were conducted by the Deputy Commissioner (Agricultural Census) and Statistician (A.C.Tab) and were presided over by the respective Divisional Commissioners. These classes were attended by the concerned Deputy Collectors of the Revenue Department, Assistant Statistians of the Statistics Division of the Agriculture Department, District and Regional Officers of the Directorate of Economics and Statistics and Land Records Department. As soon as the orientation meetings were over, training classes for the field staff were arranged in each district of the division. This was done within a short period of about 3 weeks during which all the training classes were completed. The exact procedure to be followed in preparing the list of operational holdings, compiling the census data in different schedules and checks to be applied for ensuring the complete coverage of the census were explained in detail with the help of the village revenue records. Those village officers, who, due to unavoidable circumstances, could not attend the training class, were subsequently assembled at suitable places and given training.

Dates of commencement and completion of the Census Enumeration

2.29 The census work commenced in 1981 but for one reason or the other it could not gather any momentum for about two and half years. The field work was completed by the end of December 1984.

CHAPTER III - CONCEPTS, DEFINITIONS AND DATA SOURCES

3.1 Concepts and definition adopted in the Agricultural Census 1980-81 are briefly stated below, whereas more detailed explanatory note on the same is given in the Annexure at the end of report. The sources of data, criteria adopted in determining an operational holding and procedure followed in the census are given in this chapter.

Concepts and definitions

(1) Operational Holding-

3.2 All land which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone or with others without regard to the title, legal form, size or location.

(2) Technical Unit-

3.3 A technical unit has been defined as that unit which is under the same management and has the same means of production such as labour force, machinery and animals.

(3) Agricultural Production-

3.4 Agricultural production includes growing of field crops, fruits, grapes, seeds, tree nurseries (except those of forest trees), bulbs, vegetables and flowers, production of coffee, tea, cocoa, rubber, jute, oilseeds, fodder grass *etc.*

(4) Operated Area-

3.5 Operated area would include both cultivated and uncultivated area, provided part of it is put to agricultural production during the reference period.

3.6 It would also cover the land occupied by the farm buildings, including the house of the holder, provided such buildings are within the cultivated area. If the farm buildings are located outside the cultivated area and area covered under abadi area, such buildings would not be included.

3.7 If the entire area of the holding is put to non-agricultural use and/or it is under old fallow, it will not be considered as operated area.

The operated area may comprise of :-

(a) Land owned and self operated.
(b) Land leased in.
(c) Land otherwise operated.

3.8 *(a) Land owned and self operated in* :- Land for which the cultivator has the right of permanent heritable possession would be considered as owned. This would include :-

i) Land held from Government or others under grant or lease or assignment with right of permanent heritable possession with or without right of transfer.

ii) Land operated under perpetual lease.

Self operated land would include :-

i) self cultivation
ii) land cultivated through members of the family
iii) Land cultivated with the help of hired labour

3.9 *(b) Leased in* :- Area leased in is defined as land taken on lease from others without any permanent right of possession for the lessee. Land may be leased in for :-

i) Fixed Money
ii) Fixed produce
iii) Share of produce
iv) Usufructuary mortgage
Ownership of the property is with the mortgager but the possession is with the mortgagee (*i.e.* the person to whom the mortgage is made or given) (Income from the property accrues to the mortgagee) and the mortgage is terminated as soon as the full amount is released.
v) Other terms to be specified.

3.10 *(c) Area otherwise operated* :- This would include encroachment, land forcibly occupied, unauthorised or land in dispute etc. which cannot be treated as owned or leased in, as per the definitions given above.

(5) Operational Holder-

3.11 An operational holder is the person who has the responsibility for the operation of the agricultural holding and who exercises the technical initiative and is responsible for its operation. He may have full economic responsibility or may share it with others. The Operational Holder may be Individual/Joint/Institutional.

(a) Individual : If the holding is being operated either by one person alone or by group of persons, who are the members of the same household, it will be considered as an individual holding.

(b) Joint : If two or more persons belonging to different households, share jointly as partners the economic and technical responsibility for the operation of an agricultural holding, such holding would be considered as Joint.

(c) Institutional : Holdings such as government farms sugarcane factories, co-operation farms, lands managed by trust would be treated as institutional.

Complete/Part Holding

3.12 A holding is said to be complete holding if the entire operated area of that holding is located in one village. If the operated area is spread over more than one village in the same tahsil, it would be considered as part holding.

Tahsil would be taken as the outer limit for consolidation of part holdings.

6. Land Utilization

3.13 Operated area would be classified into six broad categories :-

i) Net area sown.
ii) Current fallow
iii) Fallow land other than current fallow
iv) Other uncultivated land excluding fallow
v) Culturable waste, and
vi) Not available for cultivation

3.14 *(i) Net ara sown :* - Total area sown with crops and/or orchads (counting the area sown more than once in the same year only once)

3.15 *(ii) Current fallow :* - Cropped areas which are kept fallow during the current year.

3.16 *(iii) Fallow other than current fallow :* - All lands which are taken up for cultivation but temporarily out of cultivation for a period of not less than one year and not more than five years.

3.17 *(iv) Other Uncultivated land excluding fallow :* - This include-

3.18 *(a) Permanent pastures and other grazing lands :* - All grazing lands, whether they are permanent pastures and meadowns or not. Village common grazing lands would, however, be excluded.

3.19 *(b) Land under miscellaneous tree crops* :- Cultivable land which is not included in the net area sown but is put to some agricultural use. Land under casuarina trees, thatching, grassess, bamboo bushes and other groves for fuel which are not included under orchards would be covered under this category.

3.20 *(v) Culturable waste :* - All lands available for cultivation, whether not taken up for cultivation or taken up for cultivation once but not cultivated during the current year and the last five years or more in succession for one reason or the other. Such lands may be either wholly or partly covered with shrubs and jungles which are not put to any use. Land once cultivated but not cultivated for five years in succession would also be included.

3.21 *(vi) Not available for cultivation:-* This would include Forest, area under non agricultural use, barren and uncultivable land.

3.22 (a) *Forest* :- All lands classed as 'Forests' under any legal enactment dealing with forests or administered as forests, whether State owned or private and whether wooded or maintained as potential forest land.

The area of crops raised in the forest and grazing lands or areas open for grazing within the forests would be included under the forest area. Only private forest would be covered under this category.

3.23 (b) *Area under non- agricultural use :* All lands occupied by buildings and other lands put to uses other than agriculture within the holding.

(c) *Barren and uncultivable land :* All barren and uncultivable land within the cultivated holdings.

Irrigation :- A crop receiving water from a source in addition to natural precipitations is classed as irrigated crop, irrespective of the source and number of irrigations given.

Land not covered by the Census

3.24 The basic unit for which the information is collected in the census is an operational holding. Consequently, land not belonging to an operational holding is excluded from the coverage of the census. Thus lands under the following categories are excluded from the census.

(a) Government forest and barren lands.
(b) Government waste land not leased out, not alloted or granted to individuals or institutions for cultivation.
(c) Land under village site and village common lands.
(d) Land under non-agricultural use, such as those covered by buildings, houses and factories and those covered by the public roads, railways river, banks *etc.*

However, lands covered by private forests, pastures or grazing land and those put to non-agricultural use within the operational holdings were included in the census. More details of the lands to be included in an operational holding are given in paragraph 3.7 of this chapter.

Source of Data

3.25 In order to collect the required data for an operational holding, the information under various items covered by the census, for different parcels of land belonging to the holding was required to be first compiled and consolidated in the forms prescribed. This information for individual parcels was available in the village revenue records. Since Maharashtra has an excellent land record system and as the entire area of the State is codastrally surveyed, the details of the land use statistics along with other particulars such as, name of the tiller of the land and mode or status of cultivation with respect to the land, are readily available for each parcel in Village Form VII - XII. Similarly, the ownership register called Village Form No.VIII-A (or Khataoni) contained particulars of lands owned by each farmer. Hence for compiling the census data as required above, the Village Form VII - XII (or Khasra) and Village Form No.VIII-A were mainly made use of in the retabulation of the data for the census.

Criteria adopted for determining an Operational holding

3.26 With the existing system of land records, a readymade list of operational holdings (i.e. particulars of all the lands cultivated by each farmer) was not available. Moreover, besides the land cultivated by an operator in one village, the lands operated by him in other villages within the same tahsil had also to be found out. In order to ensure the correct determination of each operational holding, the field staff was instructed to adopt the following criteria for identifying the components of an operational holding :-

3.27 (a) only those parcels of land cultivated (either owned or leased in) by a farmer under one technical unit should be treated as an operational holding. If some parcels of lands of a holding were cultivated under one technical unit and others by another technical unit, they should be treated as two operational holdings.

3.28 (b) It should include also those parcels of land (in the possession of the operator) occupied by farm house of land put to other non-agricultural purposes, uncultivable lands and pot Kharab. However, if the entire area of a holding consisted only of such lands (*i.e.* non-agricultural, uncultivable, *etc.*) such a holding should be excluded under the census.

3.29 (c) Where some parcels of land of a holding were fallow, they should also be included in the operational holding. However, if the entire holding consisted of fallow land only (other than current fallows), the holding should be excluded. In case the entire holding consisted of "current fallows" (*i.e.* land kept fallow during 1980-81 only), it should be included in the census.

3.30 (d) Government waste lands cultivated by a farmer should be included in the operational holding.

3.31 (e) Land belonging to a temple, but cultivated by a farmer as a trustee without incurring any cost of his own and merely as a manager, should be treated as a separate operational holding belonging to the temple and reported as "cultivation managed by a trustee". Any land, owned or cultivated by the trustee of his own (reaping the benefits of the cultivation therefrom), would form a separate operational holding and the trustee treated as the operator.

3.32 (f) In some villages where consolidation of holdings had been done, the previous cultivator might, in a few cases, continue to cultivate the lands, although in the records his name was not shown. In such cases, the *de-jure* positions (*i.e.* the one shown in the records) should be taken as the criterion for determining the operational holding.

3.33 (g) Where a farmer had raised a loan by mortgaging his lands to an institution like the Land Mortgage Bank, the Record of Rights might show the Bank as the owner till the loan was repaid. But for all practical purposes, the farmer should be treated as the *de-facto* cultivator. The lands mortgaged should be trated as owned (or rented as the case may be) and self-cultivated and form part of his operational holding, if the farmer was actually cultivating his lands.

3.34 (h) In case one or more parcels of land of the holding grow grass naturally and bestoved economic benefits, it should be treated as a crop, if its area was included in the net sown area in the khasra.

Joint Holdings :-

3.35 (a) *Land cultivated jointly by members of a family :-* If two or more persons belonging to different households share jointly (as partners) in the economic and technical responsibility for the operational of an agricultural holding, the holding was said to be "Joint". In such cases, the names of all the partners should be entered under the items "name of holder" and the holding should be classified as a joint holding in the Agricultural Census. However, if the persons jointly operating the holding were members of the same household, one of them, say the head, should be considered as the individual holder.

3.36 (b) *Joint holdings with shares specified* :- In some cases, two or more farmers were shown in the record of rights as joint holders. Further, their exact shares were also indicated in terms of 'annas', but the total area of each parcel of land thus cultivated was not split up according to the area operated by each sharer, though, on the spot, such separate cultivation existed. In such cases, the land cultivated by each farmer should be treated as belonging to a separate operational holding and all other lands, if any, cultivated by him elsewhere (either in that village or in any other village in the same tahsil) should be included in his operational holding.

Procedure adopted for listing of operational holdings

3.37 The first task in the census was the preparation of the complete and correct list of operational holdings, taking necessary care to avoid any omission and duplication of entries. Similarly, a single holding had to be differentiated from a plural holding. To avoid such likely omissions and mistakes and to ensure that the Census covered all the land cultivated by each operator, when scattered in two or more villages, the talathi used his local knowledge fully and also consulted the knowledgeable farmers, sarpunch, kotwal *etc.* of the village, at a meeting of all such persons concerned, convened for this purpose.

3.38 The rest of the procedure depended on the land records system prevalent in the districts in the different regions of the State and hence the same is described below separately for each region.

(i) *Western Maharashtra (Pune, Konkan and Nashik Divisions)* :- The information on ownership holdings with particulars of parcels of land (in each holding) and the names of the owners arrnaged in the alphabetical orders was readily available in the village Form VIII-A (or Jamabandi register maintained in some parts of the State). Since it was reported that most of the farmers in Maharashtra were owner cultivators, the above village Form was taken as the starting point for preparing the list of opertional holdings. To ensure that all the owner cultivators in the village were first accounted for a preliminary listing schedule was prescribed which contained the particulars of the survey numbers (or pot hissa numbers) owned by each cultivator, whether he was resident or non-resident of the village (with particulars of the village of his residence in case of the latter) and also whether he had operated lands in other villages in the same tahsil.

3.39 Then starting with the first cultivator in the list, verifiation was made, parcel by parcel of land, as to whether it was being cultivated by the owner himself by reference to the V.F.VII-XII (or khasra). The parcels thus cultivated by the owner were ticked off in the list. For those parcels (Survey numbers and pot hissa numbers) which were not cultivated by the owner, a cross mark was made against them and the name of the actual cultivator was ascertained from the V.F. VII-XII for each parcel and it was entered in a supplementary list in the alphabetical order along with the particulars *viz.* survey and pot hissa numbers as also the area of each parcel. In this process, care was taken to see whether the name of the cultivator thus entered in the supplementary list, had not already occured, (being an owner-cultivator) in the primary list. If his name had already occurred, the particulars of land not owned but cultivated by him were also shown against his name in the primary list. Again, for each parcel of land for which verification had thus been completed, a tick mark was made at the top of the concerned page of the V.F. VII-XII indicating that the parcel of land has already been considered and included in the preliminary list.

3.40 Proceeding in the above manner, the primary list of owner-cultivators and the supplementary list of farmers actually cultivating the lands taken either on lease or rent or any

other manner was completed. Thereafter verification of all the pages of the V.F. VII-XII was made to see whether any particular parcel had remained to be included in one holding or the other. Parcels left out, if any, were included in the respective operational holdings to which they belonged. If a parcel did not belong to any of the holdings already listed, a new holding was formed. In this manner, complete count of all parcels of lands in the operated area was ensured and the preliminary as also the supplementary lists, which gave account of the operational holdings of the village, were completed.

(ii) Aurangabad Division :- In this division, the information regarding the khatedars was obtained from the Village Form No.VI (or 'Khataoni'). Using this and the V.F.No. VII-XII, the primary list of cultivators was obtained and then the procedure as described above was followed for determining and listing the operational holdings in each village.

(iii) Ex-Berar Districts of Nagpur Division :- In these districts, using the earstwhile 'Jamabandi' Form and the Crop Inspection Register ('Pere-patrak') the procedure under (i) was followed for listing the operational holdings.

(iv) Ex-C.P.Districts of Nagpur Division :- In these districts the earstwhile 'Kistabandi Khataoni' Form and 'Khasra' register were used for preparing the list of operational holdings.

Complete and Incomplete (or part) holdings

3.41 Having completed the list of operational holdings of a village they were classified as 'complete' and 'incomplete' holdings by suitable symbol against each holding of the latter category. Where all the parcels of a holding were situated in village, where they were distributed in two or more villages, those located in a village-constituted an 'incomplete' (or part) holding for that village, while all such part holdings of a farmer, taken together, formed a plural holding of the tahsil.

3.42 In case of the resident cultivators of a village, the Census data for the 'complete' holdings in that village were recorded in Register-A and for the 'incomplete' holdings in Register-B. The requisite details relating to the non-resident cultivators having lands in the villages under enumeration were recorded in the Register-C, mentioning in particulars, the village of residence of each alongwith the information about the patwari halka and revenue circle in which that village was located. The particulars thus recorded in the Register-C were transferred to a Green Schedule for each non-resident holder and sent to the concerned patwari (in whose jurisdiction the cultivator was residing) for being included in the holding of each such cultivator in the village of his residence. As generally the patwaris were made to sit in the tahsil office, after the primary compilation of census data, the exchange of wanting information (*i.e.* of all part holdings located outside the village of residence of each operator) could be easily managed and arrangements made for completing the holding of each plural holder in a systematic maner. In case of a khatedar having lands in a deserted village only, but residing in another tahsil, his holding was included in that village where most of the khatedars cultivating the lands in the deserted village, resided.

3.43 On receipt of all the relevant Green Schedule for all the holdings of those operators residing in a particular village of Census enumeration, the concerned talathi sorted out the Green Schedules according to :-

(i) the holders whose names appeared in Register-B and
(ii) the rest (*i.e.* of those farmers who only resided in the village but cultivated lands in some other village or villages).

To ensure that the above work of consolidation of the data of plural holdings was done on a systematic and satisfactory basis, it was coordinated at the circle level by the Revenue Inspector and at the tahsil level by the Tahsildar.

Posting of Census data in final census returns :-

3.44 After compiling the holdingwise Census data in the Register-A and Register-B, the holdings were classified according to their size (*i.e.* area) into 14 size classes as specified under the Census (indicated in the Appendix-I).

3.45 The holdingwise data were then posted according to size classes (to which the holdings belonged) in Register-D which contained separate pages for each size class. From the data thus compiled, size classwise aggregation under each item were obtained for each village.

Units for reporting area statistics :-

3.46 The area statistics were completed in terms of "hectare and are", right from the stage of primary compilation of the Census data.

Field Work

3.47 In accordance with the All-India time schedule fixed for the Census programme, the field work of census was planned to be completed by December 1981. However, the Association of the Patwaris refused to undertake this work and filed a petition in the Bombay High Court stating that the work of Agricultural Census may not be entrusted to the revenue officers including Talathis/Patwaris. This petition was rejected by the Bombay High Court on 20th October 1982. Even then the Talathis put up certain demands to the Revenue Minister. One of the demands was to get the help of the Gramsevaks (Village Level Workers) for this Agricultural Census work. Meetings were, therefore, held at the Minister and Secretary's level and the issue was sorted out. Thereafter, eventhough it was decided to organise the census on crash programme basis and complete it within a period of about 3 months for the one reason or the other, the work could not be taken up as desired and it went on lingering for sometime. Some of the local problems also came in the progress of the field work.To sort out the problems confronting the progress of the field work in different districts, the concerned District Officers of the problem districts were called in the Mantralaya, region by region, and various steps were taken to remove the bottlenecks and overcome the local problems.

(2) Livestock census undertaken in 1980-81 employing Zilla Parishad machinery, also adversely affected the progress of Agricultural Census to some extent.

(3) The revenue staff had to attend to the priority work like procurement, settlement of revenue dues, small savings, Family Planning Campaign *etc.*

(4) The posts of Extension Officer (Stat) in a few of the blocks in some of the districts were vacant and could not be filled in due to the economy measures and administrative problems. Subsequently proper technical guidance was not available to the field staff in such talukas till arrangements could be made to depute the Extension Officers (Stat) of other Panchayat Samiti to such problem blocks for attending to the scrutiny of the census returns.

3.48 Continuous efforts were made at different levels to speed up the work and complete

it as early as possible. In fact, the Officrs and Supervisory staff of the Census Unit at headquarters undertook intensive tours in different districts immediately after the start of the field work to see that the compilation of the census data is being attended to on the right lines with seriousness and urgency. The progress of census work was periodically reviewed at the divisional meetings of the Collectors and Chief Executive Officers of Zilla Parishads and at the meetings of the district officials every month. In case of problem districts special meetings were convened for Agricultural Census purpose at district, divisional and Mantralaya levels and district census officers were directed to take concrete steps to remove the bottlenecks and complete the census work without delays.

In spite of these efforts, the basic field work of the census was delayed by about three years and got completed by December 1984.

Supervision of the Census operations :-

3.49 In addition to the quantum of supervision entrusted to the higher officers of the revenue department, an attempt was made for increasing the scale of supervision with the assistance of the technical staff of the Statistics Division of the Agriculture Department in districts and divisions, the District Statistical Officers of the Directorate of Economics and Statistics and the Extension Officers (Stat) in the Panchayat Samities.

3.50 Prior to the commencement of the Agricultural Census, steps were taken to check whether the crop inspection had been carried out satisfactorily and the relevant particulars of the census recorded in the village Khasra (*i.e.* V.F. No.VII-XII).

3.51 Supervison of the census work was divided into two phases. In the first phase, the emphasis was on giving an appropriate and correct start to the field work and cover as many talathis in the State as possible and rapid check was organised to see whether correct procedure as laid down had been followed in preparing the list of the operational holdings in each village, the information for part or entire holdings of non-resident cultivators had been despatched to the concerned Talathi /Patwaris, preliminary schedules *i.e.* Registers A, B, Green Schedules etc. had been properly canvassed on the basis of the correct understanding of the concepts and definitions and the information to be actually reported.

3.52 The second phase of the supervison programme was organised on the rationalised basis, the emphasis being on assessing the quality of the census work.

The deficiencies noticed in the census work under both the phases of the supervision programme were brought to the notice of the revenue officers concerned and got rectified not only in respect of the returns of the villages checked, but also those of the other villges where such or other deficiencies were noticed.

Scrutiny of returns :-

3.53 The census returns (primary and final) for the Agricultural Census were deposited at the tahsil office by the Talathis after the completion of the census work village by village. Immediately thereafter the scrutiny of the returns and checking of the village level aggregates was organised in each tahsil. The Extension Officer (Stat) in each Panchayat Samiti carried out the scrutiny and finalised the census data in the manner specified. The District Statistical Officer was entrusted with the checking of the census returns on the Sample basis.

Technical deficiencies in the field work and steps taken to remove them :-

3.54 Besides the administrative and organisational problems mentioned in the previous paragraphs, the following technical deficiencies also caused delay in finalisation of the census data at the field level.

(i) Some of the talathis did not fill in all the columns in the respective registers and hence it had to be got done soon after the lapses were detected.

(ii) Some of the talathis, particularly those who were new to this work, did not carry out the retabulation properly. This resulted in incomplete coverage of the census, both in respect of number of holdings and the parcels thereof and hence it had to be got rectified.

(iii) In districts where assistance of gramsevaks was not properly filled in, leading to certain serious lapses and in few cases duplication of some of the operational holdings was also noticed. Non-Agricultural holdings were also included in the list in some cases. This also had to be got corrected.

(iv) In some of the villages, the information relating to part holding located in other villages were not recorded. This lapse had to be got corrected.

(v) Cultivable areas were reported in place of the operated areas by some of the talathis, as the primary compilation was done from the khata register instead of Khasra register

(vi) In few cases the area under "pot kharab" was included in the column for "current fallow"

(vii) Certain columns relating to irrigation and cropwise statistics provided in the census registers were not properly filled in or were left blank. In some cases, posting and aggregation errors were also noticed.

3.55 All the above errors and omissions were required to be got corrected by asking the concerned persons to reconcile the observed descrepancies.

In fact, special meetings were conducted at each district place where few census returns of each tahsil were scrutinised and final observations pointed out to the assembled staff. In addition, arrangements were made in to form a special checking squad in each tahsil for the scrutiny of census returns of the entire tahsil. Detailed training was given to the members of the Special squad in the work of scrutiny of the returns and finalising the census data speedily.

Despatch of returns

3.56 The census returns duly finalised were despatched by the Tahsildars to the district Collectorate along with the list of villages covered by the census. After the returns were received for all tahsils, the district Collectorate then arrnanged for their transportation along with the above lists to the office of the Deputy Commissioner (Agricultural Census), Pune.

CHAPTER-IV - ANALYSIS OF CENSUS RESULTS

Introduction

4.1 As already stated in Chapter I, this was the third large scale Agricultural Census carried out in the State with 1980-81 as reference year, and data on all the concerned items, is collected on the basis of complete enumeration of all the agricultural holdings in the State. In the previous census of 1976-77, the number of holdings and the operated area only were collected on the basis of complete enumeration of all the agricultural holdings in the State, the information on the remaining items was collected through the Sample Agricultural Census. Since the Sample census covered a large number of villages (7,700) it was not only possible to provide satisfactory estimates of the land uses based on the analysis of the data, but also to study the inter-relationship between the size of the holdings, land use, irrigation and such other characteristics for those regions and districts where these characteristics are well spread and the area thereunder was also quite high.

4.2 In the 1980-81 Agricultural Census the operational holdings were grouped into 14 size classes on the basis of size (particulars of which are given in the Appendix-I) the lowest being less than 0.5 ha. and the highest being 50 ha. and above. Such grouping of the holdings serves as a basic classificatory character also for relating other aspects, such as tenancy, crop pattern, sources of irrigation, *etc.* to the size of holding. In the previous census there were 13 size classes wherein the 7th and 8th size groups of the current census had been combined. However, for the sake of the easier comprehension of the results, further summarisation of the same according to certain broad size groups has been done and the relevant tables have been given in the body of the report as also in the Appendix-II.

Presentation of Results

4.3 The results of the current census have been presented for the State as a whole and for the individual districts, as done in the Census report of 1976-77. Similarly, the results are also given for the 6 regions, the very regions adopted by the National Sample Survey Organisation, Government of India.

The names of the district comprising each region are as stated below :-

Region	Districts comprising the region
1) Region - I (Coastal)	B.S.D.,Thane, Raigad, Ratnagiri and Sindhurg (*i.e.* the Konkan region).
2) Region - II (Inland Western)	Six districts of Ahmednagar, Pune, Solapur, Satara, Sangli and Kolhapur (*i.e.* all the districts of Pune Revenue division and Ahmednagar of Nashik Revenue Division).
3) Region - III (Inland Northern)	Three districts of Jalgaon, Dhule and Nashik.
4) Region - IV (Inland Central)	Seven districts of Aurangabad, Beed, Parbhani, Nanded, Osmanabad, Jalna and Latur of Aurangabad Revenue Division.
5) Region - V (Inland Eastern)	Six districts of Nagpur, Wardha, Amravati, Buldhana, Akola and Yavatmal.
6) Region - VI (Eastern)	Three districts of Bhandara, Chandrapur and Gadchiroli.

Contents of the Census tables

4.4 In order to understand the nature and type of analysis, a brief account of the contents of the tables of the Census results is given below :-

4.5 Table-I gives the distribution of holdings according to size and their classifications according to individual, joint, and institutional holdings.

4.6 Table-II presents the distribution of holdings according to whether they were entirely owned, entirely leased in or partly owned and partly leased. Table-III furnishes the details of land according to six different types of land use *viz.* (i) net sown area (ii) current fallow, (iii) uncultivated area, (iv) other fallows (v) cultivable waste and (vi) area not available for cultivation.

4.7 Table-IV gives the size-classwise information regarding irrigation, *i.e.* holdings grouped according to whether they were wholly irrigated, partly irrigated or wholly unirrigated.

4.8 Table-V contains details of irrigation, such as sourcewise number of holdings and area irrigated. Lastly Table-VI gives the irrigated, unirrigated and total area under different crops.

4.9 The information in respect of holdings held by SC/ST is given separately at the State level on the above lines at the end of this chapter under separate sub-heading.

4.10 Table-I and II taken together provide information on the pattern of land holdings, tenancy and ownership. Table-III, V and part of Tables IV and VI taken together provide details of land use and irrigation. Table VI contains information regarding area under crops. The six tables containing the census results for the State, regions and districts are given in Part-II. The description of the contents of the tables is given in Appendix-I of this report.

Coverage of Agricultural Census

4.11 The Agricultural Census 1980-81 covers all the agricultural holdings in the State including institutional holdings.

Comparability of the results of the two Censuses

4.12 The results of the Agricultural Census 1980-81 are directly comparable with those of the previous census of 1976-77 in respect of certain characteristics as 1976-77 census was Sample census while that of 1980-81 is based on complete enumeration of agricultural holdings. The figures given in Table No.1 of Part-II of current census are comparable with the corresponding figures of the previous census only in respect of total number of holdings, individual holdings, joint holdings and institutional holdings and their operated area.

4.13 Because of the implementation of the Land Ceilings Act, the tendency towards increase in the number of smaller holdings and decrease in the number of bigger holdings followed by increase in the area of the smaller holdings and considerable decrease in the area of bigger holdings is observed as it is seen that there is large difference between the value of the characterisation in the different size classes of holdings in 1980-81 as compared to 1976-77 census, and similar difference between 1980-81 and 1976-77 figures was observed.

4.14 The results of the current census along with those of the previous census have been given wherever a comparative study of the same was feasible. In this process, since there were only 13 size groups in 1976-77 and 14 in 1980-81, the 7th and 8th group of 1980-81 census haye been combined in order to make two sets of figures comparable for the respective size groups.

Discussion of Results

4.15 The results of the census are discussed in three sections. Section-I deals with the coverage of the census and the salient findings of the census are given in an overview. In Section-II the results are discussed districtwise, while in Section-III the findings are

summarised in relation to the size class of holdings. The results of the SC/ST holdings are discussed separately.

SECTION - I

Coverage

4.16 By definition, the census covered land within the operational holdings, leaving out land under occupation by the State and also in certain cases entire land put to non-agricultural use. The total area covered by the census was, therefore less than the total geographical area based on the official statistics, namely those published in the Annual Season and Crop Report. Thus, as against the State total geographical area of 308 lakh ha. of land (official statistics), the census covered only 214 lakh hectares of operated land, *i.e.* 69.4 per cent as can be seen from the table below :-

TABLE NO. 4.1

Census coverage and Land use

(Area in lakh hectares)

Sr. No.	Land use	Area based on			
		Official statistics		Census	
		1976-77	1980-81	1976-77	1980-81
1.	Land not available for cultivaton				
	(a) Forests ..	53	50	*	*
	(b) Land put to non-agricultural use ..	10	10	*	*
	(c) Barren and uncultivated land ..	17	17	*	*
	Total	80	81	10	12
2.	Uncultivated Lands				
	(a) Pastures ..	16	16	*	*
	(b) Land covered by miscellaneous tree crops ..	2	1	*	*
	Total	18	17	4	5
3.	Cultivable waste land ..	10	10	8	7

	Grand Total	308	308	210	214

* Separate figures are not available.
Individual figures may not add up to the corresponding total due to rounding.
The official statistics figures are provisional.

The land not covered by census consisted mainly of land not available for cultivation and (2) other uncultivated land. Part of cultivable waste land and fallow land (other than current fallow) was also not included in Agricultural Census. It is, noteworthy that operational holders held two third or more of the cultivable waste land and other fallow land (12 lakh ha. out of 18 lakh ha.). The net sown area covered by 1980-81 census was 177 lakh ha. i.e. 83% of the operated area as against 183 lakh ha. based on official statistics.

An Overview

4.17 1980-81, the State had 68.62 lakh operational holdings with the total area of 213.62 lakh ha. giving an average area of 3.11 ha. holding. Most of the holdings (94.3 %) were individual holdings, 5.6% were joint holdings and 0.2% were institutional holdings. Joint and Institutional holdings accounted for 6.2% and 0.5% area respectively of the total operated area. The individual holdings accounted for the remaining 93.3% of operated area. The average size

of the individual holdings worked out to 3.08 ha. while joint holdings average size was 3.47 ha. The average size of the institutional holdings was 10.31 ha.

4.18 In Maharashtra State, tenancy of agricultural land was legally abolished in 1957 and is permitted in only a few cases. Hence, practically all cultivation of land is done only by peasents who owned lands. Thus in 1980-81 97.5% of the total operated land was owned and rest being rented as revealed by census data. It is of interest to note that as compared with the extent of rented land in 1970-71 *i.e.* 5% there has been decrease in area of such land during 10 years period between the two complete census as was expected due to vigorous implementation of the tenancy act. In fact, the total number of operational holdings could be classified into three categories as below :-

(1) Owner operated *i.e.* area owned and self operated (97.5%)
(2) Partly owned and partly rented *i.e.* the operator leased in some land in addition to his own (2.0%)
(3) Pure tenant *i.e.* all the land operated was taken on rent (0.4%).

As shown by census, the total gross irrigated area under growers was 20.5 lakh ha. (10.5% of the total cropped area) while the net irrigated area was 14.36 lakh ha. (7.4%). The irrigated area in the State was thus proportionately small. Of 68.62 lakh of the total operational holding in the State only 11.85 lakh ha. or 17.3% were either partly or wholly irrigated. The number of wholly irrigated holdings was 2.5 lakh or 3.65%.

Number of crop growers

4.19 Number of growers of principle crops and minor but comercially important crops is given in the table below.

TABLE NO. 4.2

Number of crops growing selected crops in 1980-81

	Crop			Number of farmers (in lakh) growing the crop
1.	Paddy (kh.)	...	...	19.13
2.	Paddy (Summer)	...	...	0.43
3.	Bajri	...	...	12.39
4.	Kh. Jowar	...	...	24.88
5.	Cotton	...	...	16.60
6.	Rabi Jowar	...	...	18.58
7.	Wheat	...	...	7.63
8.	Sugarcane	...	...	4.39
9.	Groundnut	...	...	7.00
10.	Summer Groundnut	...	...	0.83

The size class distribution of the holdings of the farmers growing the above crops (given in part-II) showed that more than 50% of the paddy growers had smaller holdings of the size of below 2 ha. while in case of all the remaining crops 50% growers had holdings of size 1 to 5 ha. Maharashtra is mainly a foodgrain growing State with nearly 3/4th of its cropped area under foodgrains. Cereals occupied 114.56 lakh ha. out of 184.9 ha. cropped area (*i.e.* 62.0%). Pulses occupied an area of 22.86 lakh ha. (*i.e.* 12.4%). Among the cereals, jowar was leading crop occupying more than 35% of the cropped area followed by Bajri (9%) and rice (8%). Cotton was leading cash crop of the State accounting for about 14% of the cropped area. Groundnut was also grown in several districts, its area being about 4%.

Size distribution of number of holdings and operated area in the State in the two censuses

4.20 The table below summarises the results of the two censuses of 1976-77 and

1980-81 in respect of number of holdings and the operated area in the State according to broad size groups.

TABLE No. 4.3

Size distribution of number of operational holdings and operated area.

Size class of holdings	Number of holdings (in lakh)		Percentage increase (+) or decrease (-) over 1976-77	Operated area (in lakh)		Percentage increase (+) or decrease (-) over 1976-77
	1976-77	1980-81		1976-77	1980-81	
Mrginal (upto 1.00 ha.)	15.05 (26)	19.26 (28)	+28.0	7.06 (3)	9.73 (5)	+37.8
Small (1 to 2 ha.)	11.42 (20)	15.40 (22)	+34.8	16.76 (8)	23.33 (11)	+39.2
Semi-medium (2 to 4 ha.)	13.39 (23)	16.86 (25)	+25.9	38.33 (18)	48.18 (23)	+25.7
Medium (4 to 10 ha.)	13.51 (24)	13.92 (20)	+3.0	83.39 (40)	84.49 (39)	+1.3
Large (10 ha. and above)	4.26 (7)	3.18 (5)	-25.4	65.52 (31)	47.88 (22)	-26.9
All size classes	57.64 (100)	68.62 (100)	+19.0	211.05 (100)	213.62 (100)	+1.2

Note - (1) Individual figures may not add up to the corresponding totals due to rounding.
(2) Figures in the bracket are percentages based on the corresponding total of the respective columns.

As compared with the number of operational holdings in 1976-77 that in 1980-81 was higher by 10.98 lakh or 19%. The total operated area, however, did not show much variation being only 2.57 lakh ha. more *i.e.* a meagre increse of nearly 1.2%.

4.21 The distribution of holdings over the broad size groups shows that in 1980-81 the number of holdings under each of the four categories of marginal, medium, semi-medium and small has increased while in large size the number of holdings has decreased. The operated area also showed an increase in the first four classes and decrease in the large size of holdings. As regards percentage of holdings in the different size classes, it is noticed that as in 1976-77 census in 1980-81 also majority of the holdings are concentrated in the first 3 groups *viz.* marginal, small and semi-medium. These accounted for more than 75% of the total holdings in 1980-81. In contrast, distribution of the operated area amongst the five major size groups was completely different. Medium and large holdings together accounted for over 62% of the total operated area in the State while marginal and small holdings contributed hardly about 15% of the total operated area.

4.22 A significant feature brought out by the above table is considerable increase in the number of holdings in 1980-81 as compared to that in 1976-77 in case of first three size groups. In the last size group, however, there was appreciable decrease of about 25% in the number of holdings. Correspondingly, the operated area under different size groups also followed the same pattern of variation *viz.* increase of over 25% in the operated area in the first three size groups and decrease of about 26% in the last size groups. The decrease in the number of

holdings and the operated area in the last size group is mostly attributed to the implementation of the Land Ceiling Act and partly to natural factor such as succession or inheritance, transfer and sale of lands *etc.*

4.23 The net irrigated area at State level recorded an increase from 13.32 lakh ha. in 1976-77 to 14.36 lakh ha. in 1980-81 *i.e.* about more than 1 lakh ha. (*i.e.* about 8%). The number of irrigated holdings taking those wholly irrigated and partly irrigated together also increased from 13.05 lakh to 14.35 lakh holdings *i.e.* by 1.3 lakh ha. (*i.e.* nearly 10%).

SECTION - II

Districtwise Findings

4.24 The districtwise summary of the results of the two censuses relating to the number of holdings, area operted and average size of holdings is given in Table 4.4 The percentage of small holdings and their areas are also given in the above table. While discussing the census results in both Section-II and III, those pertaining to Bombay Suburban (or Greater Bombay) district have been excluded since it consists mostly of urban area; but the census figures have been just presented for that district wherever necessary.

Number of operational holdings and area operated

4.25 In 1980-81 the number of holdings in the individual districts varied from 88,000 (or 1.3% of the total number of holdings) in Gadchiroli district upto 3,82,000 holdings (or 5.6%) in Ahmednagar district. The distribution of operational area among the different districts ranged from 2.11 lakh ha. or about 1% of the State operated area in Gadchiroli district to 12.63 lakh ha. or 5.9% in Ahmednagar district. In the last 1976-77 census also maximum operational area of 13.08 lakh ha. was observed in Ahmednagar district.

4.26 As compared with the figures obtained in Agricultural Census 1976-77, the number of operational holdings at State level in the current census was higher by 19%. This feature was noticed in all the districts, the increase in number of holdings ranging from 9.96% in Parbhani district to 38.6% in Yavatmal district. The interesting feature of this fact is that this increase exceeded 20% in Dhule, Satara, Aurangabad (Aurangabad and Jalna together) Beed, Osmanabd (and Latur) all the districts of Vidarbha excluding Bhandara *i.e.* Region-V and districts of Chandrapur (Chandrapur and Gadchiroli together). The increase below 10% was observed only in the district of Parbhani.

4.27 The operated area in 1980-81 showed relatively small variation as in 1976-77 at the State level and also in most of the districts. Thus the overall increase at State level was 1.2%. More than 5% increase in the operated area was observed in the districts of Ratnagiri (Ratnagiri and Sindhudurg together), Aurangabad (Aurangabad and Jalna together) and Amravati districts. The decrease in the operated area in 1980-81 as compared to 1976-77 was maximum (about 11%) in Parbhani district. The decrease in operated area was also noticed in Ahmednagar, Pune, Solapur, Sangli, Kolhapur, Nanded, Akola and Wardha distgricts. However, the decrease was of a smaller order (below 5%) in these districts.

Average size of holdings

4.28 Among the districts, the smallest average size of 1.6 ha. was recorded in Kolhapur and the highest of 4.7 ha. in Osmanabad district. It is interesting to note that in spite of the appreciable increase in the number of holdings in 1980-81, Kolhapur was the very district which had the smallest average size of holding in the last 1976-77 census also.

TABLE - 4.4

Districtwise number of Operational Holdings and area operated in 1976–77 and 1980–81

District	No. of operational holdings		Increase (+) or Decrease (—) over 1976-77 %	Operated Area (hectares)		Increase (+) or Decrease (—) over 1976-77 %	Percentage of holdings of size below 2.00 hectares				Average size of holdings (in hectares)		Increase (+) or Decrease (—) over 1976-77 %

TABLE NO. 4.5

Average size of holding	Name of district	
	1976-77	1980-81
Very Small (below 3.0 ha.)	Thane, B.S.D., Raigad Ratnagiri, Satara, Sangli, Kolhapur and Bhandara	B.S.D., Thane, Raigad, Ratnagiri Sindhudurg, Bhandara, Chadrapur, Gadchiroli, Satara, Sangli, Kolhapur
Small (between 3 and 4 ha.)	Pune, Jalgaon, Nanded Amravati and Chandrapur	Buldhana Akola, Amravati, Yavatmal, Nagpur, Aurangabad, Parbhani, Beed, Nanded, Nashik, Dhule, Jalgaon, Ahmednagar, Pune
Medium (between 4 and 6 ha.)	Ahmednagar, Solapur, Dhule, Nashik, Aurangabad, Beed, Parbhani, Osmanabad, Nagpur, Wardha, Buldhana, Akola and Yavatmal	Wardha, Jalna, Osmanabad, Latur, Solapur
Large (above 6 ha.)	---	---

4.29 The average size of holdings was lower in 1980-81 in every district as compared with that in 1976-77. This is due to the fact that the number of holdings increased due to further reforms implementation of the Land Ceiling Act and succession or inheritance and also to some extent on account of transfer and sale of lands. The area operated did not very much at the district level in most of the disticts (only in 3 districts the operated area showed an increase of more than 5% and in only one district it was decreased by 11% as compared to that of 1976-77 as detailed in the above paragraph).

The average size of holdings in the State in 1980-81 was 3.1 hectares.

4.30 An examination of the districtwise average size of holdings reveals that the districts when grouped broadly into four categories as indicated in Table No. 4.5 below, according to very small (below 3 or less than the State average) small (between 3 and 4 hectares) Medium (between 4 and 6 hectares or less than twice the State average) and large (twice the State average and above), the number of districts under first and second group has increased and that in the 3rd group has considerably decreased as compared to that in 1976-77. The number of distrticts having large average size of holdings (*i.e.* above 6 ha.) is nil. It was also nil in 1976-77 whereas five districts appeared in this category in 1970-71 Agricultural Census.

4.31 The analysis of cropping pattern which is discussed latter, if related to the average size of holdings, indicates that Paddy growing districts had a smaller average size of holdings, their share in the number of holdings also being relatively large as compared to their share in the area.

Joint Holidings

4.32 The districtwise distribution of the number of joint holdings is given in Table No. 1-A of the Appendix-II. It will be seen that out of 3.83 lakh joint holdings in the State, Bhandara district had the highest number being 14.6 percent of the total followed by Jalgaon

and Solapur, contributing 8.5 and 8.3 percent respectively to the Total Table No.2 in Appendix-II giving the proportionate number of joint holdings within the individual districts shows that in Bhandara district the proportionate number of joint holdings is more than 20%. The districts having more than 10% joint holdings are 4, namely Jalgaon and Solapur (11.8% each) Chandrapur (11.9%) and Gadchiroli (12.2%). The districts having proportionate number of joint holdings betwen 5 to 10 per cent numbered 10. Only in 4 districts the joint holdings were less than 1%.

Proportion of Smaller holdings (of size less than 2 hectares)

4.33 The number of farmers having holdings of size less than 2 hectares (or 5 acres) in the State was as high as 50 per cent. But the area operated by them was quite small being about 16 per cent of the total operated area in the State. The relative proportion of farmers having smaller size of holdings as above was found to be large in the paddy growing districts. It was between 61 to 77 per cent in Thane, Raigad, Ratnagiri, Sindhudurg, Satara, Sangli, Kolhapur and Bhandara districts. Consequently the average size of holdings in these districts was quite less being 1.6 to 2.7 hectares. The proportion of such small sized holdings was comparatively low being 45 per cent or less in predominently millet and cotton growing districts namely Nashik, Dhule, Solapur, Akola, Yeotmal, Wardha and Nagpur districts and all the seven districts of Aurangabad Division. Similar trend was observed in the previous census of 1976-77 also, as can be seen from Tables 3 and 4 Appendix-II.

Tenure and Tenancy

4.34 As mentioned earlier more than 98% of the holdings in the State were entirely owned by the farmers. In fact, as will be seen from the Table No.5 of the Appendix-II, the percentage of such holdings was more than 95 in all the districts barring Sindhudurg and Gadchiroli where it was 92 and 91.5 respectively. In previous census, the proportion of such holdings was lower in all the districts.

4.35 Only in 5 districts namely Thane (1.5), Sindhudurg (1.3), Kolhapur (1.1), Aurangabad (1.00) and Gadchiroli (3.8) the percentage of wholly rented holdings was 1.0 or more. In all the remaining districts it was less than 1 per cent.

4.36 The percentage of partly owned and partly rented holdings, was less than 2 in 23 districts. More than 3 per cent of such holdings were observed in the districts of Sindhudurg (5.7), Kolhapur (3.1), Latur (3.2) and Gadchiroli.

4.37 The proportion of the overall rented area in the State was only about 1.3 per cent. In the district it was lowest in Bhandara being only 0.13 per-cent. In the last census also the same district had lowest overall rented area (0.4%). The highest overall rented area was found in Yavatmal district being 4.65 per cent. In fact the relative extent of total rented area was quite low *i.e.* less than 2 per cent in 23 districts of the State. It is of interest to note that as compared with 1976-77, the proportion of rented area in the current census was much lower in all the districts.

Land use

4.38 The share of the individual districts in the area and number of holdings discussed earlier convey the situatiuon about the partial distribution of land operated in the State. The analysis of land use brings out the extent of utilization of land for different purpose. Table No.6

in Appendix-II gives the percentage area under different categories of land use during the two census years of 1976-77 and 1980-81.

4.39 The extent of utilization of land for agriculture in 1980-81 *i.e.* proportion of the net sown area to the total occupied area varied very widely from 30.6% in Sindhudurg district to as high as 92.2% in Parbhani district. But in several districts *i.e.* 23 out of 29, the net sown area exceeded 80% while in 3 more districts, it was between 70 to 80. Only in 3 districts of Raigad, Ratnagiri and Sindhudurg (i.e. Konkan region), the percentage of the net sown area was relatively very low being 47.2, 31.3 and 30.6 respectively.

4.40 As compared with the percentage the net sown area in 1976-77, that in 1980-81 did not differ at the State level. The two sets of figures differed only marginally in almost all the districts.

4.41 The State total area under the remaining five items of land utilisation (*viz.* uncultivated land, current fallow, other fallows, culturable waste and land not available for cultivation) together accounted for only 17% of the operated area. Consequently, the proportion of area under these individual items was hardly 2 to 5.7 per cent. Under these circumstances, no attempt has been made to compare the two sets of census figures. But generally the district level proportionate area under individual items did not change appreciably in the two census years.

4.42 The relative area under culturable waste was appreciably high in the 3 Konkan districts *viz.* Raigad, Ratnagiri and Sindhudurg being 14.6, 20.5 and 12.0 per cent respectively. Similarly the relative area not available for cultivation was also appreciably high under these three districts being 16.3, 25.2 and 24 per cent respectively. This is attributed to the fact that as the three districts are situated around the mountainous area of the Sahyadri ranges, the area under cultivation was comparatively lower.

Irrigation

4.43 The census data collected on the different aspects of irrigation such as the number of irrigated holdings area irrigated according to sources of irrigation, cropwise utilisation and categories of beneficiaries are summarised in the following paragraphs.

Irrigated holdings and area irrigated in the State

4.44 The results of the census 1980-81 show that the State is very poorly placed in the Indian Union in respect of the availability of irigation facilities to farming. The table below summarises the State level irrigation statistics.

TABLE No. 4.6

(Number of holdings and area in lakhs)

Item		Wholly irrigagted	Wholly unirrigated	Partly irrigated & unirrigated	Total
Number of operational Holdings	..	2.51(3.7)	54.3(79.1)	11.8(17.2)	68.6(100)
Net sown area (ha)	..	3.25	131.72	42.07	177.04
Net irrigated area (ha)	.	3.25	-	11.11	14.36
Average net sown area per holding (ha)	..	1.30	2.42	3.55	2.58
Average net irrigated area (ha)	..	1.30	-	0.94	1.00

Out of 177.04 lakh hectare of net sown area in the State, only 14.36 lakh heactares *i.e.* 8.1 per cent of the net sown area received irrigation from one source or the other. This irrigation was distributed in 14.31 lakh holdings *i.e.* 20.9 per cent of the total number of holdings in the State. This indicated fact that 91.9 per cent of the net sown area and 79.1 per cent of the total number of operational holdings in the State did not have any irrigation. This fact is noteworthy.

4.45 Out of 14.31 lakh irrigated holdings, only 2.51 lakh holdings (*i.e.* 17.5%) were wholly irrigated. The irrigated area under this holdings was 3.25 lakh hectares or 22.6 per cent. Of the total unirrigated area (about 77.4 per cent) was from partly irrigated holdings.

4.46 The average net sown area per holding in case of wholly irrigated holdings, wholly unirrigated holdings and partly irrigated holdings was 1.30, 2.42 and 3.55 hectares respectively. According to the average in case of a partly irrigated holdings was higher by 1.13 hectares that of a wholly unirrigated holding. The overall average irrigated area per irrigated holding (taking together the first and third categories of holdings referred above) was 1.00 hectare.

4.47 The census estimates of the above characteristics of 1980-81 as compared with the corresponding Sample Census figures of 1976-77 for the different districts are given the Table Nos. 7 and 8 of the Appendix-II. It is seen that at State level, the total number of wholly irrigated holdings decreased from 4.2 to 3.7 per cent in 1980-81 as compared with those of 1976-77. The wholly unirrigated holdings on the other hand increased from 77.3 per cent in 1976-77 to 79.1 per cent in 1980-81. In case of partly irrigated and partly unirrigated holdings there was a slight decline in proportionate number.

Distribution of Irrigation in the districts

4.48 The information on the districtwise distribution of irrigation is summarised below, in respect of-

(1) Area irrigated
(2) Number of irrigated holdings and
(3) Sourcewise area irrigated

Even though the percentage net irrigated area for the State was low (8.1%) yet some districts are better placed having appreciably higher percentage of area irrigated while other districts have practically no irrigation as will be clear from Table No.4.7 below

TABLE NO. 4.7

Distribution of districts according to percentage net irrigated area

Class intervals in percentage			
15 and above	10 to 15	5 to 10	Less than 5
Year 1976-77			
Ahmadnagar (17.9) Bhandara (32.5) Chandrapur (17.9)	Pune (12.1) Satara (11.1) Sangli (11.3) Solapur (11.0) Kolhapur (13.9)	Nashik (8.7) Jalgaon (8.8) Dhule (8.0) Nagpur (9.2)	Raigad (3.3) Aurangabad (4.6) Beed (3.1) Amravati (3.5) Wardha (4.3)

TABLE NO. 4.7 - *Contd.*

Class intervals in percentage			
15 and above	10 to 15	5 to 10	Less than 5
Year 1976-77 - Contd.			
			Thane (1.4) Ratnagiri (1.8) Parbhani (2.7) Nanded (2.9) Osmanabad (2.8) Buldhana (2.4) Akola (1.9) Yavatmal (2.2) Maharashtra (7.8)
Year 1980-81			
Ahmednagar (13.3) Chandrapur (17.5) Gadchiroli (20.0) Bhandara (37.2)	Nashik (10.3) Pune (14.5) Solapur (11.1) Satara (13.5) Sangli (11.7) Kolhapur(13.3)	Jalgaon (6.3) Dhule (8.9) Aurangabad (5.1) Nagpur (9.7)	Thane (1.3) Raigad (4.0) Ratnagiri (0.4) Sindhudurg (4.4) Jalna (2.9) Parbhani (2.8) Beed (3.4) Nanded (2.6) Osmanabad (4.1) Latur (1.5) Buldhana (2.5) Akola (2.1) Amravati (3.5) Yavatmal (2.2) Wardha (4.3) Maharashtra (8.1)

4.49 The districts of the State can be divided into two broad categories according to (i) those having percentage irrigated area above that at the State level (*i.e.* 8 percent) and (ii) below that at the State level in 1980-81. The first category comprising of 12 districts having 73 per cent of the irrigated holdings in the State with 76 per cent of the State irrigated area. Thus less than half the number of districts of the State accounted for nearly three-fourths of the total number of irrigated holdings and of the total net irrigated area in the State. Similar trend was observed in the last Census of 1976-77 also.

Number of irrigated holdings

4.50 The number of holdings according to the three categories (i) wholly irrigated, (ii) wholly unirrigated and (iii) partly irrigated, expressed as percentage of the total number of holdings in each district is shown in Table No.7 of the Appendix-II. The percentage of net irrigated area under the first and third categories of holdings is also given under the same table. In the 12 districts where the percentage irrigated area was higher than 8% (*i.e.* the State level percentage), the proportionate number of irrigated holdings varied from above 16 per cent in Dhule district to over 45 per cent in Bhandara district. The proportionate number of wholly

irrigated holdings ranged from about 0.1 per cent in Yavatmal district to over 18 per cent in Bhandara district while that of partly irrigated holdings varied from 1.7 per cent in Ratnagiri district to about 33 per cent in Bhandara district. Practically the same pattern was observed in the last Census also.

4.51 In the individual districts, the percentage number of wholly irrigated holdings was lower in 1980-81 in Ahmednagar, Pune and Solapur districts and higher in Satara, Bhandara and Chandrapur districts. Difference was also observed in other districts but it was marginal. The percentage number of partly irrigated holdings was found to be lower in Nashik, Dhule, Jalgaon, Sangli, Kolhapur, Parbhani, Beed, Nanded, Wardha and Chandrapur districts. It was higher in Thane, Pune, Osmanabad and Bhandara districts and in other districts the difference was marginal.

4.52 The percentage net irrigated area in the wholly irrigated holdings was lower in 1980-81 in comparison with that of 1976-77, particularly in Raigad, Ahmednagar and Pune districts. It was higher in Satara, Kolhapur, Bhandara and Chandrapur districts. In other districts the difference was marginal.

4.53 The average irrigated area per wholly irrigated holdings and partly irrigated holdings did not differ very much in two Census years in most of the districts as well as at State level.

Sources of Irrigation

4.54 The districtwise percentage of area irrigated by sources is shown in Table No.9 in Appendix-II. Well was the important source of irrigation accountig for 60 per cent of the total irrigated area in the State as against 57 per cent in 1976-77. The net area irrigated by wells was 8.55 lakh hectares. Canal was the second important source of irrigation in the State, contributing about 20 per cent of the total irrigated area in 1980-81 as compared to 22 per cent in 1976-77. The area irrigated by canals was 2.93 lakh hectares. Canal irrigation was concentrated in 13 districts of Dhule, Jalgaon, Nashik, Ahmednagar, Pune, Solapur, Satara, Parbhani, Nanded, Nagpur, Chandrapur, Bhandara and Gadchiroli districts which accounted for about 90 per cent of the total area irrigated by canals.

4.55 Tank was localised source of irrigation. Bhandara, Chandrapur and Gadchiroli districts alone accounted for more than 80 per cent of the total area irrigated by tanks.

4.56 Among the other sources of irrigation, lift irrigation was important. This source of irrigation was predominantly prevalent in the three districts of Kolhapur, Satara and Sangli. This accounted for over 75 per cent of the total area under lift irrigation.

In additon, the data was collected on the following items also :-

(1) Number of holdings or farmers having irrigation facilities according to each source.
(2) Number of wells used for irrigation and those not in use and
(3) Number of wells fitted with pumps.

The findings in this regard are briefly summarised for each major source of irrigation. As the irrigated area was concentrated only in some districts, the findings are discussed here in respect of those districts only which are important for the respective sources of irrigation.

(1) Number of holdings irrigated by each source

4.57 The table below gives the State level figures of the number of holdings receiving irrigation by such source.

TABLE NO. 4.8

Number of holdings and area irrigated by different sources in 1980-81

Source	No.of holdings (in lakh) Irrigated by each source		Area irrigated (in lakh ha.)	
	Number	Percentage	Area	Percentage
1) Wells ..	8.51	59.3	8.55	59.5
2) Canals ..	2.80	19.5	2.93	20.4
3) Tanks ..	1.39	9.7	1.66	11.6
4) Lift irrigation ..	1.62	11.3	0.85	6.0
5) Others ..	0.57	4.0	0.37	2.5
Total	14.35		14.36	

Of the 14.35 lakh irrigated holdings, 59.3 per cent were irrigatged by wells and 19.5 per cent by canals. Tank and lift irrigation were the sources of irrigation in about 10 and 11 per cent of the holdings respectively. The rest of the holdings *i.e.* 4 per cent were irrigated by other sources.

(2) Irrigation by Wells

4.58 Out of 8.50 lakh farmers having well irrigation facilities, 6.85 lakhs *i.e.* over 80 per cent of them were distributed in 12 districts as indicated in the Table below.

TABLE NO. 4.9

Number of holdings and area irrigated by wells in selected district in 1980-81

District	Number of farmers irrigating by wells	Area irrigated	Average area irrigated per irrigated holdings
		Hectare	Hectare
Nashik ..	71,469	71,824	1.00
Dhule ..	26,200	35,510	1.36
Jalgaon ..	53,147	60,958	1.15
Ahmednagar ..	1,06,300	1,52,185	1.43
Pune ..	68,322	87,507	1.28
Satara ..	70,665	53,077	0.75
Sangli ..	56,198	40,652	0.72
Solapur ..	67,869	86,536	1.28
Kolhapur ..	24,823	15,697	0.63
Aurangabad ..	37,993	31,767	0.83
Jalna ..	14,860	14,818	1.00
Nagpur ..	30,305	31,880	1.05
State Total	8,50,612	8,55,110	1.01

4.59 It is seen that Ahmednagar district had the largest number of farmers using well irrigation, being nearly 1.06 lakhs or over 12 per cent of the State total number. The highest area benefitted was also found in Ahmednagar district being to the extent of 1.52 lakh hectares

i.e. nearly 18 per cent of the total area under well irrigation in the State. The average area irrigated per irrigated holdings was 1.0 hectare at the State level, it was highest in Ahmednagar district being 1.43 lakh hectares. In some other districts also, it was 1.00 hectare and above except in the districts of Satara, Sangli, Kolhapur and Aurangabad in which it ranged from 0.63 to 0.83 hectare. In 1976-77 Census also similar findings relating to irriated area and its concentration in 10 out of 12 districts listed above was observed.

(3) Estimated number of wells in use

4.60 Out of 6.91 lakh wells used for irrigation in the State during 1980-81, 6.46 lakhs wells *i.e.* over 93 per cent of the total number of wells were fitted with pumps. Thus hardly 7 per cent of the wells at traditional mode of lifting water. About 79 per cent of the wells fitted with pumps were located in 12 districts of the State as can be seen from the table below.

TABLE NO. 4.10

Number of wells in use and area irrigated by wells in 1980-81

District	Number of wells in use				
	With Pumps	Without Pumps	Total Number	Average area per well	Number of wells not in use
				Hectare	Hectare
Nashik	65,821	4,420	69,347	1.00	5,111
Dhule	23,301	497	23,188	1.53	3,108
Jalgaon	44,405	2,317	45,817	1.33	9,740
Ahmednagar	1,30,271	7,285	1,37,556	1.10	6,426
Pune	45,226	4,883	50,038	1.75	6,567
Satara	34,280	1,648	35,928	1.47	4,138
Sangli	35,057	5,642	40,427	1.00	4,877
Solapur	54,163	4,701	58,438	1.48	6,588
Kolhapur	18,990	355	18,696	0.84	2,277
Aurangabad	35,557	1,605	36,628	0.86	2,937
Jalna	15,371	1,313	16,638	0.89	750
Nagpur	26,793	2,819	29,583	1.07	7,710
State Total	6,45,767	53,975	6,90,850	1.24	1,00,985

4.61 It is interesting to note that in most of the individual districts also generally 90 per cent of the wells were fitted with pumps.

The average area irrigated per well was estimated at 1.24 hectares at the State level. Among the districts Pune had the largest average area being 1.75 hectares. In the remaining districts also this averge was 1.00 hectares or more except in districts of Kolhapur, Aurangabad and Jalna.

1.01 lakh wells in the State were not in use in 1980-81. Out of this nearly 60 per cent were located in the above 12 districts.

(4) Irrigation by Canal

4.62 In all 2.80 lakh farmers in the State were found to get benefits of canal irrigation. It is noteworthy that out of them 2.32 lakhs or 83 per cent were located in the 11 districts shown in the table below. Bhandara district had the largest number of farmers using canal for irrigation.

TABLE NO. 4.11

Number of holdings and area irrigated by canals in selected districts in 1980-81

Sr. No.	District	CANALS		
		Number of holdings irrigated	Area irrigated	Average area irrigated per irrigated holdings
1.	Nashik ..	13,163	14,119	1.07
2.	Dhule ..	7,888	7,174	0.90
3.	Jalgaon ..	7,099	7,679	1.08
4.	Ahmednagar ..	44,179	45,972	1.04
5.	Pune ..	22,362	28,100	1.25
6.	Satara ..	29,933	18,693	0.62
7.	Sangli ..	3,021	1,337	0.44
8.	Solapur ..	15,936	20,165	1.26
9.	Parbhani ..	6,635	11,266	1.69
10.	Nanded ..	6,477	5,104	0.78
11.	Bhandara ..	58,924	65,677	1.11
12.	Chandrapur ..	16,863	18,728	1.11
13.	Gadchiroli ..	7,828	8,846	1.13
14.	Kolhapur ..	1,316	385	0.29
15.	Aurangabad ..	2,463	2,895	1.17
16.	Jalna ..	2,513	3,350	1.33
17.	Beed ..	2,015	1,765	0.87
18.	Osmanabad ..	2,085	2,679	1.28
19.	Latur ..	345	348	1.00
20.	Buldhana ..	1,196	1,716	0.59
21.	Akola ..	1,248	1,174	0.94
22.	Amravati ..	94	47	0.50
23.	Yavatmal ..	4,955	4,080	0.82
24.	Wardha ..	2,894	3,319	1.14
25.	Nagpur ..	8,275	1,226	1.48
	State Total	2,79,799	2,92,609	1.04

4.63 Out of 2.93 lakh hectares under canal irrigation in the State, about 81 per cent was contributed by the above 11 districts. Out of the above area Bhandara contributed for about 22 per cent and Ahmednagar contributed for about 16 per cent area.

4.64 The average area irrigated per irrigated holding by canal was 1.04 hectares at the State level, while it was largest in Nagpur district being 1.48 hectares. In the remaining 10 districts it was nearly 1.00 hectare or above except in Satara and Dhule districts where it was 0.62 and 0.90 hectare respectively.

As compared with 22 per cent area irrigated by canal in 1976-77 that in 1980-81 was lower being 20.4 per cent.

4.65 It is noteworthy that 8 districts *viz.* Nashik, Dhule, Jalgaon, Ahmednagar, Pune, Satara, Solapur and Nagpur were benefitted by both canal and well irrigation to an apreciable extent.

(5) Irrigation by tanks

4.66 1.39 lakh farmers in the State used tank as the source of irrigation. Of these nearly

1,16,000 or 84 per cent were located in Bhandara, Chandrapur and Gadchiroli districts alone, the remaining being distributed mostly in Nagpur, Pune, Satara and Sangli districts. The table below gives the estimated figures for three major districts.

TABLE NO. 4.12

Number of holdings and area irrigated by Tanks in selected districts in 1980-81

District	Number of holdings irrigated	Area irrigated	Average area irrigated per irrigated holding
1. Bhandara ..	54,237	67,717	1.24
2. Chandrapur ..	44,570	54,227	1.21
3. Gadchiroli ..	17,701	22,961	1.29
State Total	1,38,786	1,65,955	1.19

4.67 Out of 1.66 lakhs hectares of area irrigated by tanks, about 87 per cent was located in Bhandara, Chandrapur and Gadchiroli districts. The average area irrigated by tanks per holding in the State was 1.19 hectares.

(6) Irrigation by Lift

4.68 1.62 lakh farmers irrigated the crops through lift irrigation, 88 per cent of the farmers were located in Satara, Sangli and Kolhapur districts. In particular, Kolhapur district alone had about 51 per cent of the above farmers as can be seen from the table below.

TABLE NO. 4.13

Number of holdings and area benefitted by Lift Irrigation in selected district 1980-81

District	LIFT IRRIGATION		
	Number of holdings irrigated	Area irrigated	Average area irrigated per holdings
1. Satara ..	21,704	11,021	0.50
2. Sangli ..	39,156	19,519	0.49
3. Kolhapur ..	82,237	35,052	0.42
State Total	1,62,415	85,482	0.52

4.69 The area benefitted by lift irrigation was 0.85 lakh hectares out of which 77 per cent was contributed by three districts. Further, Kolhapur district alone contributed nearly 41 per cent of the total area by lift irrigation in the State. The average area irrigated by lift per holding was 0.52 hectare in the State.

It is interesting to note that pattern of extent of benefit due to tanks and lift was similar to that observed in 1976-77.

Cropping Pattern

4.70 Statistics of the area of almost all the crops grown in Maharashtra were collected in the census. A broad indication of the cropping pattern that emerged from the analysis of the data is summarised in the Table No.4.14 given below :-

TABLE NO. 4.14

	Area in '000' hectare				Proportion of crop area to			
	Irrigated		Total		Gross cropped area		Percentage irrigated area	
	76-77	80-81	76-77	80--81	76-77	80-81	76-77	80-81
Rice	321	339	1530	1624	8.4	8.36	21.0	20.87
Jowar (kh)	40	43	3203	3247	17.6	16.72	1.3	1.32
Jowar (Rb)	190	224	3028	3510	16.7	18.08	6.3	6.38
Jowar (Kh+Rb)	231	267	623	6757	34.3	34.81	3.7	3.9
Bajri	53	56	1666	1670	9.2	8.60	3.2	3.35
Wheat	332	520	819	986	4.5	5.07	40.6	52.73
Total Cereals	950	1193	10716	11456	59.1	59.02	8.9	10.41
Tur	3	3	566	636	3.1	3.27	0.5	0.47
Total Pulses	33	137	2562	2286	14.1	11.77	1.3	5.99
Total foodgrains	984	1331	13278	13742	73.1	70.79	7.4	9.68
Sugarcane	250	288	250	288	1.4	1.48	100.0	100.00
Total foodcrops	1400	1826	13850	14385	76.4	74.11	10.1	12.69
Total oilseeds	25	127	1691	1467	9.3	7.55	1.5	8.65
Cotton	20	53	1835	2800	10.1	14.42	1.1	1.89
Total foddercrops	28	35	681	690	3.8	3.55	4.1	5.07
Total non-foodcrops	76	222	4286	4875	23.6	25.11	1.8	3.52
Total gross-cropped area	1477	2048	18147	19410	100.00	100.00	8.1	10.55
Area cropped more than once	145	612	999	1706	-	-	14.5	35.87
Net sown area	1332	1436	17148	17704	-	-	7.8	8.11

4.71 It is seen that a large part of the cropped area was devoted to food crops accounting for over 74 per cent of the cropped area. Among the food crops, foodgrains covered about 71 per cent of the cropped area comprising 59 per cent under cereals and nearly 12 per cent under pulses. Non-food crops occupied about 25 per cent of the cropped area. The leading single crop of Maharashtra was jowar a cereal which is grown both in the kharif and rabi seasons. It occupied about 35 per cent of the gross cropped area in the State. In order of importance among cereals next to jowar was bajri followed by rice covering 9 per cent and 8 per cent of the total cropped area, respectively. Among the non-food crops, cotton occupied over half of the area under non-food crops. On the whole, the total area covered by oilseeds was about 8 per cent of the gross cropped area and about one-third area under the non-food crops. The leading oilseed crop was groundnut as it occupied nearly half of the area under oilseeds. Thus on the whole, kharif and rabi jowar, cotton, bajri and rice were the principal crops of the State as they covered nearly 64 per cent of the total cropped area. Two more crops *viz.* groundnut and wheat accounted for about 9 per cent of the gross cropped area. Thus these seven crops accounted for practically three-fourth of the State total cropped area.

4.72 Pulses as a group, were also important as they covered about 12 per cent of the cropped area. Among pulses, tur, gram and mug were relatively important crops. Thus all the 10 important crops together make up a total of fourth-fifth cropped area of the State.

Evidently, nearly one-fifth of the cropped area was distributed among rest of the crops. Among which commercial crops like sugarcane, banana, chillies, onions, fruits and vegetables were important.

As compared with the area under the crops in 1976-77 and 1980-81 was higher in case of cereals.

Cropping pattern in the districts

4.73 The principal crops grown in the individual districts and the area thereunder expressed as percentage of the gross cropped area in the respective districts are given in Table No.10 in Appendix-II below. In Table No.11 Appendix-II, the area contributed in terms of percentages by each district to the State total area under the individual principal crops has been given. The findings on the basis of these two tables are summarised below.

4.74 Table No.10 shows that jowar was relatively the most important crop as judged by the proportion of its area to the total gross cropped area in the districts of Dhule, Jalgaón, Ahmednâgar, Pune, Solapur, Satara, Sangli, Aurangabad, Jalna, Parbhani, Beed, Nanded, Osmanabad, Latur, Buldhana, Akola, Yavatmal, Nagpur, Chandrapur and Gadchiroli districts. From Table No.11 of the Appendix-II, it is seen that these 27 districts together accounted for 92 per cent of the area under jowar in the State. Amongst them, Solapur district had the largest area under jowar being about 11 per cent of the State total area.

4.75 Bajri was the next important cereal crop grown to an appreciable extent in the districts of Nashik, Dhule, Jalgaon, Ahmednagar, Pune, Satara, Sangli, Aurangabad, Jalna and Beed districts. These 10 districts covered about 93 per cent of total Bajri area in the State. Thus, it is seen that the cultivation of Bajri was concentrated in fewer districts than in case of jowar despite the fact that bajri was the second important crop in the State. In fact, the districts of Nashik, Ahmednagatr, Aurangabad, and Jalna, these four districts together accounted for nearly 50 per cent of bajri area in the State. It was in Nashik district that the crop was grown relatively to a large extent and more half of the State area under Bajri was accounted for in Nashik district.

4.76 Paddy crop was placed third in the order of importance among the principal cereal crops of the State. It was extensively grown in the four coastal districts, namely Raigad, Thane, Ratnagiri and Sindhudurg and among the interior districts of Chandrapur, Gadchiroli and Bhandara in the eastern border of the State. The latter three districts have dependable irrigation facilities. These seven districts together accounted for about 67 per cent of the area under paddy. In other districts like Nagpur, Kolhapur, Satara, Pune, Nashik and Nanded paddy was grown to an appreciable extent. Thus the above 13 districts covered over 90 per cent of the paddy area. However, in the former seven districts and Kolhapur district the crop occupied a larger area than any other crop. In Thane, Raigad, Ratnagiri, Sindhudurg, Bhandara and Gadchiroli districts, paddy occupied over 45 to nearly 84 per cent of the cropped area in the respective districts, its coverage in Raigad district was as high as 83.7 per cent.

4.77 Wheat although a principal crop, occupied hardly 5 per cent of the gross cropped area in the State. The cultivation of wheat was spread over 25 districts excluding the paddy growing coastal districts of Thane, Raigad, Ratnagiri and Sindhudurg. In Nashik, Nagpur districts the area under wheat was more than ten per cent of the cropped area under respective districts, while in any districts it ranged from less than 1 per cent to about 7 per cent of the respective cropped area in the district.

4.78 Cotton is the main cash crop of the State. It is grown on a relatively appreciable scale i.e exceeding 20 per cent of the gross cropped area of the districts of Jalgaon, Parbhani, Nanded, Buldhana, Akola, Amravati, Yavatmal and Wardha. An examination of the cropping pattern in these districts reveals that only in Akola, Amravati, Yavatmal and Wardha districts, the proportion of area devoted to cotton exceeded that of any other crop including jowar which was as most important crop. More than 90 per cent of the total gross cropped area under cotton is obtained in the districts of Parbhani, Nanded, Buldhana, Akola, Amravati and Yavatmal.

4.79 The proportion of the area occupied by cotton was relatively very small in the districts of Satara, Ahmednagar, Sangli and Solapur. However, the crop in these districts is mostly irrigated and being long staple variety is one of the important cash crop in these districts.

4.80 Among the non-food crops, the next in importance to cotton as cash crop is groundnut which accounted for about 4 per cent of the total cropped area in the State. In districts of Dhule, Kolhapur and Jalgaon, one-tenth of the cropped area was under groundnut. The crop was grown to an appreciable scale *i.e.* about 5 per cent of the respective cropped area in the districts of Nashik, Satara, Sangli and Latur in the State.

4.81 Among the commercial crops, sugarcane was important due to its high yields and relatively high recovery percentage, although its share in the total cropped area was only 1.5 per cent. It was grown comparatively larger scale in the seven districts of Nashik, Ahmednagar, Sangli, Kolhapur, Pune, Satara and Solapur. One-fifth of the State area under sugarcane was found grown in Ahmednagar and next to that was Nagpur having one-sixth of the State cropped area under sugarcane.

Fodder crop

4.82 Fodder crop occupied a prominent place in the cropping pattern of the State, particularly in the districts of Raigad, Ratnagiri, Pune, Satara and Kolhapur. The proportion of area devoted to fodder crop in these districts ranged from 13.5 per cent in Pune to 38.7 per cent in Thane district.

Irrigated area under crops

4.83 It would be seen from the table No.4.14 that the total gross irrigated area was only 10.5 per cent. The entire area under sugarcane was under irrigation. Amongst the cereal crops, about 53 per cent of the area under wheat was irrigated. The percentage of the area irrigated under rice was about 21 per cent. The irrigated area under cotton was very less being only 1.9 per cent.

SECTION - III

Analysis of Census data according to size of holdings

4.84 The main purpose of the Census was to study the structure of land holdings, the basic unit of enumeration - in relation to the essential agricultural characteristics such as land use, cropping pattern, irrigation, tenancy and type of holdings namely joint and individual holdings, etc. To facilitate such a study, the original 14 size classes have been further compressed into 6 broad size groups of holdings. The results obtained according to these broad size groups are presented in the Tables Nos.12 to 23 in Appendix-II, and the findings in regard to the major characteristics of the land holdings are summarised below.

(i) Proportion of number of small sized holdings i.e. of size below 2 hectares and their area

4.85 The districts with different proportion (per cent) of small sized holdings *i.e.* size below 2 hectares have been grouped and shown in Table No.4.15 below while the percentage of area covered by them is given in subsequent Table No.4.16.

4.86 In 1980-81 the proportionate number of holdings of the size less than 2.0 hectare was as high as 77 per cent in Kolhapur district while it was less 32 per cent in Yavatmal, Latur and Osmanabad districts. Preponderance of such small sized holdings was noticed in 3 more paddy growing districts *viz.* Raigad, Sindhudurg and Bhandara. In the districts of Thane, Ratnagiri, Satara, Sangli, Amravati and Chandrapur, the proportion of such holdings was more than 60 per cent. In 1976-77 the number of districts having more than 50 per cent of such small holdings was only 7.

TABLE NO. 4.15

Distribution of districts according to percentage of Small holdings (i.e. size below 2 hectares)

70 and above	50 to 70	40 to 50	30 to 40	Less than 30
B.S.D.(94)	Thane (68)	Nashik (40)	Jalgaon (39)	
Raigad (75)	Ratgnagiri (61)	Dhule (46)	Solapur (33)	
Sindhudurg (71)	Pune (52)	Ahmednagar (46)	Aurangabad (36)	
Kolhapur (77)	Satara (69)	Nanded (41)	Jalna (34)	
Bhandara (75)	Sangli (61)	Akola (45)	Parbhani (34)	
	Buldhana (48)	Nagpur (41)	Beed (39)	
	Amravati (51)		Osmanabad (31)	
	Chandrapur (66)		Latur (31)	
	Gadchiroli (58)		Yavatmal (31)	
	State (51)		Wardha (38)	

4.87 The proportion(per cent) of area of small sized holdings to the total operated area in the different districts is summarised in the table below.

TABLE NO. 4.16

Distribution of districts according to percentage of operated area covered by small size holdings (of size class below 2 hectares)

Class Intervals (In percentage)			
20 and above	15 to 20	10 to 15	Less than 10
B.S.D. (64)	Ratnagiri (16)	Nashik (11)	Solapur (8)
Thane (22)	Sindhudurg (18)	Dhule (12)	Osmanabad (8)
Raigad (32)	Jalgaon (16)	Aurangabad (12)	Latur (8)
Satara (26)	Ahmednagar (15)	Jalna (12)	
Kolhapur (33)	Pune (15)	Parbhani (11)	
Amravati (20)	Sangli (19)	Beed (12)	
Bhandara (30)	Buldhana (17)	Nanded (13)	
Gadchiroli (23)	Akola (16)	Yavatmal (10)	
	Chandrapur (16)	Wardha (13)	
	State (15)	Nagpur (14)	

4.88 It is of interest to note that though 70 per cent or more of the operational holdings in each of the districts of Raigad, Sindhudurg, Kolhapur and Bhandara were small sized yet the area of these holdings was relatively quite low being about 31.33 per cent of the total operated area in the respective districts. The operated area of such holdings was less than 10 per cent

in the 3 districts of Solapur, Osmanabad and Latur.

(ii) Proportion of big holdings of the size of 10 hectares and above

4.89 As can be seen from Table No.4.17 below, nearly 10 per cent of the holdings were big in size i.e. of area 10.0 hectares and above in Solapur and Osmanabad districts while their proportion was about 3 per cent or less in the 5 districts of Raigad, Gadchiroli, Bhandara, Kolhapur and Satara.

TABLE NO. 4.17

Distribution of districts according to proportion (percentage of big holdings of size 10 hectares and above)

Class intervals (In percentages)			
10 and above	8 to 9	6 to 7	5 per cent or less
Solapur (10)	Latur (9)	Nashik (6)	B.S.D. (0.3)
Osmanabad (10)		Aurangabad (6)	Thane (4)
		Jalna (7)	Raigad (2)
		Beed (6)	Ratnagiri (5)
		Akola (6)	Sindudurg (4)
		Yavatmal (7)	Jalgaon (4)
		Wardha (6)	Dhule (4)
		Nagpur (7)	Pune (5)
			Ahmednagar (5)
			Satara (2)
			Sangli (4)
			Kolhapur (1)
			Parbhani (5)
			Nanded (4)
			Buldhana (5)
			Amravati (4)
			Bhandara (1)
			Chandrapur (4)
			Gadchiroli (2)
			State (5)

4.90 The area covered by the big holdings, as can be seen from Table No.4.18 below, varied from 35 per cent in Sindhudurg and Solapur districts to 10 per cent in Bhandara district, with respect to the total operated area in the respective districts.

TABLE NO. 4.18

Distribution of districts according to Percentage of operated area in High holdings (i.e. 10 hectares and above)

Class Intervals (In percentages)			
40 to 50	30 to 40	20 to 30	Less than 20 per cent
	Sindhudurg (35)	Thane (26)	B.S.D. (9)
	Solapur (35)	Ratnagiri (29)	Raigad (19)
	Osmanabad (33)	Nashik (23)	Jalgaon (16)
		Ahmednagar (24)	Dhule (16)

TABLE NO. 4.18 (Contd.)

Class Intervals (In percentage)			
40 to 50	30 to 40	20 to 30	Less than 20 per cent
		Pune (28)	Satara (17)
		Sangli (23)	Kolhapur (16)
		Aurangabad (11)	Parbhani (18)
		Jalna (24)	Nanded (16)
		Beed (22)	Amravati (19)
		Latur (28)	Chandrapur (19)
		Buldhana (21)	Bhandara (10)
		Akola (23)	Gadchiroli (19)
		Yavatmal (25)	
		Wardha (22)	
		Nagpur (21)	
		State (22)	

Districtwise number of operational holdings and their area expressed as percentages during the two Census years of 1976-77 and 1980-81 are given in Table 3 and 4 in Appendix-II for different size of classes.

(iii) Joint Holdings

4.91 Table No.1- (A) in the Appendix-II shows that out of 3.83 lakh joint holdings in the State, Bhandara has maximum number of about 56,000 joint holdings and other districts having more than 30,000 joint holdings are Jalgaon and Solapur districts, the area under such holdings in these 3 districts are 1,01,000; 93,000 and 1,69,000 hectares respectively. Thus these 3 districts contributed more than 27 per cent of the corresponding State total area.

4.92 Within the individual districts, the percentage of joint holdings based on total number of operational holdings was relatively appreciable in the districts of Dhule, Solapur, Bhandara, Chandrapur and Gadchiroli being more than 11 per cent *i.e.* more than the total of State level figures as can be seen from Table 2 of the Appendix-II. In order to examine whether the joint holdings were associated with certain sizes of holdings of farmers, the proportion of these holdings according to broad size groups for the above 5 districts is given in Table No.4.19 below.

TABLE NO. 4.19

Number of Joint holdings as percentage of total number of operatiuonal holdings by size class in selected districts.

District	Size Class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
1	2	3	4	5	6	7	8
Dhule	13.0	10.9	10.3	10.2	14.1	7.1	11.8
Solapur	12.0	9.8	27.8	16.4	24.0	36.2	11.8
Bhandara	20.4	24.4	26.8	29.0	38.9	11.1	21.6
Chandrapur	11.5	11.5	13.7	14.1	20.9	20.8	11.9
Gadchiroli	10.5	12.5	18.8	25.8	28.3	41.7	12.2
Total State	5.5	5.2	6.0	7.4	11.4	16.8	5.6

(Percentage is based on extremely small number of operational holdings)

4.93 It is seen that in Bhandara, Chandrapur and Gadchiroli the percentage of joint holdings in the different size groups increased with the increase in the size of holdings upto 50 hectares. However, in Dhule district the percentage appears to be slightly decreased with the increase in size of holdings upto 20 hectares.

(iv) Tenancy

4.94 In 1980-81 about 1.3 per cent of the total operated area in the holdings was taken on lease by the farmers. The proportion of holdings taken on lease to the total number of holdings was about 1.9 per cent (taken together with the partly and wholly rented holdings). This shows that practically very small number of farmers leased in lands for cultivation. Districtwise estimates of percentage of number of holdings and area under three categories of tenure are given in Table No.5 in the Appendix-II.

4.95 The districts where the proportion of the rented area was higher than State level percentage were Thane, Sindhudurg, Kolhapur, Aurangabad, Jalna, Beed, Nanded, Osmanabad, Amravati Yavatmal and Gadchiroli. Yavatmal district had the highest rented area of 4.63 per cent. This percentage varied from 1.5 to 4.3 per cent in the remaining districts as can be seen from Table No.4.20 below.

TABLE NO. 4.20

Rented area as percentage of total operated area in selected districts according to the size class of holdings.

District	Size class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
1. Thane ..	2.1	2.0	2.2	1.5	2.5	2.7	2.1
2. Sindhudurg ..	2.7	2.2	1.3	2.2	1.3	0.02	2.0
3. Kolhapur ..	2.0	2.8	4.4	8.8	8.6	13.5	3.7
4. Aurangabad ..	1.5	1.5	1.9	3.0	7.7	1.3	2.0
5. Jalna ..	1.3	1.0	1.3	1.6	4.7	1.5	1.3
6. Beed ..	0.9	0.8	1.3	2.4	4.1	1.4	1.5
7. Nanded ..	1.0	1.1	1.6	2.3	4.3	—	1.5
8. Osmanabad ..	0.5	0.7	1.0	2.1	4.2	1.6	1.3
9. Amravati ..	1.5	1.7	2.6	4.0	5.4	0.9	2.3
10.Yavatmal ..	2.7	3.3	5.1	6.7	6.8	3.6	4.7
11.Gadchiroli ..	6.7	4.4	3.1	1.9	1.3	0.5	4.3
Total State	0.9	1.0	1.3	1.7	2.4	2.2	1.3

4.96 The relative extent of tenancy showed an upward trend in Kolhapur district from 2.0 to 13.5 per cent with the increase in the size of holdings in all the classes. Increase in the percentage of rented area also increased with the increase in the size in the districts of Aurangabad, Beed, Nanded, Osmanabad, Amravati and Yavatmal upto size of 50 hectares. However, in Gadchiroli district there was downward trend from 6.7 per cent to 0.5 per cent with the increase in the size of holdings. The percentage of rented area in the remaining districts was low.

(v) Land Use

4.97 The most important item of land use is the net sown area which accounted for 83 per cent of the total operated area in the State. Hence, it will be of interest to examine its distribution according to size of holdings. It is significant to observe that the percentage net sown area in the individual size classes showed a continuous downward trend from slightly over 87 per cent to just below 40 per cent with the increase in the size of holdings (excluding the first two sizes), indicating that in the bigger holdings, the proportionate area devoted to agricultural production was comparatively lower. This is attributed to the fact that the percentage area under total uncultivated land (*i.e.* lands includes other fallow land and culturable waste) showed a gradual upward trend with the increase in the size of holdings. Similar trend was also observed in case of land not available for cultivation (*i.e.* includes land under forests and non-agricultural use as also barren and uncultivable land), particularly in the bigger size groups, where the percentage area under each of these two items of land use was relatively high.

(vi) Irrigation

4.98 As was stated earlier (under Section-II) the percentage of net irrigated area was higher than the State percentage (8.1 in 11 districts). Hence, an attempt is made to study the relationship between the extent of irrigation and the size of holdings in case of these 11 districts. Table No.4.21 below gives the proportion of irrigated area to net sown area according to different size classes of holdings in these districts.

TABLE NO. 4.21

Irrigated area as percentage of net sown area according to size class of holdings

District	Size class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Nashik	15.93	11.65	9.33	6.76	4.97	6.76	10.34
Jalgaon	10.03	9.36	8.61	7.40	6.71	8.76	8.94
Ahmednagar	24.74	21.72	15.66	8.61	9.10	53.89	18.25
Pune	21.57	17.97	12.72	7.52	4.58	16.44	14.54
Satara	16.94	13.62	10.90	8.42	5.30	24.81	13.49
Sangli	15.39	13.68	9.04	6.91	6.50	3.96	11.71
Solapur	20.30	12.75	10.01	7.97	0.86	40.90	11.07
Kolhapur	17.39	12.85	8.66	5.93	7.11	2.80	13.32
Nagpur	11.81	9.08	9.73	9.48	8.44	15.94	9.73
Bhandara	38.25	37.21	36.35	33.99	38.22	27.98	37.20
Chandrapur	40.40	16.69	10.63	10.03	8.42	11.64	17.47
Total State	12.52	8.99	6.64	5.02	4.82	19.93	8.11

4.99 Only in the district of Bhandara, the irrigated area practically remained the same in most of the size groups of holdings. In the remaining 10 districts, the percentage irrigated area showed declining trend with the increase in the size of holdings upto 50 hectares. However, in the districts of Ahmednagar and Kolhapur the percentage is slightly increased in the size group of 20-50 hectares.

A study of the relationship, if any, between the percentage of irrigated area in different size classes of holdings and the source of irrigation was carried out. The findings are summarised in the following paragraphs.

(a) Irrigation by canals

4.100 Water supplied by canal is an external source and would normally be available on the basis of the location of the farm in the command area rather than on the size of the farm. The extent of area irrigated in a holding by this source, will however, depend on the distribution of the parcels comprising the holding and their coverage by the command area. Against this background, a study of the percentage net area irrigated by canal with respect to the net sown area in different size classes of holdings has been carried out with the help of Table No. 4.22 below, wherein the above information is given for the districts with appreciable percentage area under canal irrigation.

TABLE NO. 4.22

Area irrigated by Canal as percentage of net sown area by size class of holdings

District	Size class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Nashik ..	3.82	1.97	1.19	0.66	0.46	0.83	1.66
Ahmednagar ..	5.64	4.92	2.69	1.28	1.57	43.66	4.15
Pune ..	5.81	3.97	2.44	0.95	0.27	14.28	3.22
Satara ..	4.06	2.84	1.74	0.76	0.77	22.46	2.97
Solapur ..	4.67	2.32	1.55	0.76	0.06	38.55	1.99
Nagpur ..	3.36	2.18	2.15	1.25	1.36	2.33	2.20
Bhandara ..	19.50	17.33	14.34	10.32	6.96	0.55	16.85
Chandrapur ..	9.82	4.21	1.88	1.48	1.05	-	3.91
Total State	3.10	1.88	1.12	0.59	0.52	15.86	1.65

The percentage net area irrigated by canal showed a downward trend with the increase in the size of holdings upto 50 hectares in almost all the districts. Exceptional are the districts of Ahmednagar and Nagpur wherein this percentage is slightly increased in the size class of 20- 50 hectares.

(b) Irrigation by Wells

4.101 The area irrigated by wells expressed as percentage of net sown area with the individual size groups of holdings is presented in Table No. 4.23 below for the districts where the percentage area irrigated by wells was slightly appreciable.

TABLE NO. 4.23

Area irrigated by Wells as percentage of net sown area in different size groups

District	Size class of holding in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size Classes
Nashik ..	11.53	9.47	8.00	5.95	4.42	5.84	8.47
Dhule ..	4.90	5.59	4.84	4.95	3.12	0.36	5.07
Jalgaon ..	7.93	8.09	7.64	6.76	5.81	0.76	7.71
Ahmednagar ..	18.79	16.54	12.46	7.23	6.91	8.51	13.75
Pune ..	13.63	12.44	9.21	5.90	3.95	1.64	10.03
Satara ..	9.05	8.75	8.37	7.15	4.24	2.19	8.42
Sangli ..	8.32	8.28	7.27	6.18	6.00	3.36	7.65
Solapur ..	14.62	9.75	7.92	6.91	0.75	2.29	8.53
Aurangabad ..	6.83	6.42	4.27	3.76	3.59	1.08	4.58
Nagpur ..	6.41	5.45	5.82	5.74	4.77	5.20	5.73
Total State	5.87	5.40	4.47	3.63	3.34	2.89	4.82

The percentage area irrigated by wells as in the case of canals showed declining trend as the size of holdings increased upto 50 hectares in almost all the district. However, this variation was of low order in the districts of Jalgaon, Dhule and Nagpur.

(c) Irrigation by Tanks

4.102 In Bhandara, Chandrapur and Gadchiroli districts, tank is the important source of irrigation. The percentage area irrigated by tanks in different size classes of holdings for these districts is given in Table No.4.24.

TABLE NO. 4.24

Area irrigated by Tanks as percentage of net sown area by size Class of holding

District	Size class of holding in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Bhandara ..	16.10	17.31	18.28	19.44	27.33	26.86	17.38
Chandrapur ..	27.64	10.15	6.94	6.43	4.60	7.93	11.32
Gadchiroli ..	13.86	12.18	12.33	13.67	10.38	4.60	12.72
Total State	1.80	0.95	0.66	0.54	0.64	0.45	0.94

4.103 The percentage irrigated area showed a general upward trend in Bhandara district from 16 per cent to over 27 per cent upto 50 hectares. In Chandrapur district there was a decline in the percentage area irrigated by tanks with the increased in the area upto 50 hectares. In Gadchiroli district, the variation was of very low order upto 50 hectares.

(d) Area under lift irrigation

4.104 The percentage area under lift irrigation was appreciable only in the 3 districts of Satara, Sangli and Kolhapur and the same is presented in Table No.4.25 below.

TABLE NO. 4.25

Area under Lift irrigation as percentage of net sown area by Size class of holdings

District	Size class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Satatra ..	3.30	1.60	0.56	0.19	0.16	0.26	1.74
Sangli ..	6.50	5.06	1.40	0.42	0.11	-	3.67
Kolhapur ..	11.82	7.69	4.87	3.26	4.96	2.44	8.50
Total State	1.31	0.53	0.22	0.11	0.12	0.46	0.48

It is seen that the percentage of area under lift irrigation generally declined as the size of holdings increased in all the 3 districts, except in Kolhapur where it showed slight increase in the 20-50 hectares size groups and in Satara slight increase is shown in the group of 50 hectares and above.

(vii) Relative importance of different sources of irrigation

4.105 In order to study the relative importance of the different sources of irrigation and to see whether it was related to the size of holdings also, Table No.4.26 is presented below giving the percentage of the area irrigated by canal, based on the total net irrigated area due to all the sources taken together, in the selected districts.

TABLE NO. 4.26

Area irrigated by Canal as percentage of net irrigated area in different size group of holding

District	Size class of holding in the hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Nashik ..	24	17	13	10	9	12	16
Dhule ..	29	17	14	5	9	-	16
Jalgaon ..	17	11	8	7	12	-	11
Ahmednagar ..	23	23	17	15	17	81	23
Pune ..	27	22	19	13	6	86	22
Solapur ..	23	18	15	9	7	1	18
Satara ..	24	21	16	9	15	90	22
Nagpur ..	28	24	22	16	13	15	23
Bhandara ..	51	47	39	30	18	2	45
Chandrapur ..	24	25	18	15	12	-	22
Gadchiroli ..	36	23	15	10	10	16	24
Total State	25	21	17	12	11	80	20

4.106 The above table reveals a distinct trend of declining importance of canal as a source of irrigation as the size of holdings increased over all the size groups upto 50 hectares in the districts of Nashik, Pune, Solapur, Nagpur, Bhandara, Chandrapur and Gadchiroli. Only in the districts of Dhule, Jalgaon, Ahmednagar and Satara, this percentage has declined upto holding size of 20 hectares and has increased in the size of 20 -50 hectares. This implies that the farmers with smaller holdings, canal was the more important source of irrigation than in case of bigger holders. Again, though the number of farmers with holdings of the size 50 hectares and above was very few, yet they stand apart from the observed pattern in the districts of Ahmednagar, Pune, Satara, and Gadchiroli, the very big holdings had canal as the important source of irrigation with about 76 per cent of the irrigated area being irrigated by canal.

4.107 It is of interest to note that 51 per cent of the irrigated area was due to canals in the first size group only in Dhule district. Because of this, canal irrigation in these districts as a whole, over all size classes was highest *i.e.* 45 per cent.

4.108 Barring the few cases cited in the preceding paragraph, the holdings in none of the size groups and districts received irrigation water predominantly from canals, in most cases, canal irrigation benefitted less than one-fourth of the irrigated area. If the table similar to that of Table No.4.26 is prepared for wells, it will be seen that in most of the districts and in most cases well was the major source of irrigation. It will also be seen that the proportion of the area irrigated by wells to the total net irrigated area with individual size groups generally increased with the increase in the size of holdings.

4.109 In Bhandara district, however, the trend similar to the one stated above for well irrigation as seen in respect of tank irrigation as is clear from Table No.4.27 below.

TABLE NO. 4.27

Area irrigated by Tank as percentage of total net irrigated area by Size Class of holdings

District	Size class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Bhandara	42	47	50	52	72	96	47
Chadrapur	68	61	65	64	54	68	65
Gadchiroli	55	66	69	72	58	10	64
Total State	15	11	10	11	13	2	12

However, in Chandrapur district, the variation is not appreciable. In Gadchiroli district the increase in trend is seen only upto 20 hectares while it is declined with the increase is the holdings size from 20 hectares onwards.

4.110 At district level, tanks accounted for 47- 65 per cent of the irrigated area in the above 3 districts thereby confirming that tanks and not wells was major source of irrigation in these 3 districts.

In Kolhapur district, lift irrigation accoutned for nearly 64 per cent of the total irrigated area and it was major source of irrigation in all the size classes, as can be seen from Table No.4.28 below.

TABLE NO. 4.28

Area under Lift irrigation as percentage of total net irrigated area by Size class of holdings

District	Size class of holdings in hectares						
	Upto 2	2 to 5	5 to 10	10 to 20	20 to 50	50 and above	All size classes
Kolhapur ...	68.0	60.3	56.4	55.1	68.8	87.1	63.8
Total State	10.5	6.0	3.3	2.2	2.6	2.3	6.0

4.111 The percentage irrigated area in the different size classes showed downward trend with the increase in the size of holdings upto 20 hectares in Kolhapur and at State level.

(viii) Crop pattern according to size class of holdings

4.112 In the context of subsistence agriculture, the proportionate area devoted to foodgrains is generally expected to be higher in the smaller holdings than in the larger holdings. Against this background, the ralationship between the actual cropping pattern and the size of holdings was studied and the findings are summarised below.

4.113 As already seen, the percentage area under foodgrain crops considerably varied from district to district. In order to examine whether the proportion of gross cropped area devoted to foodgrains varied with the size class of holdings. Table No.15 is presented in Appendix II. For the purpose of this study, the districts can be conveniently grouped into 3 categories according to weather the district is growing paddy, millet or cotton predominantly.

TABLE NO. 4.29

Distribution of districts according to different percentage area under Major crops

Predominantly cotton growing districts	Predominantly paddy growing districts	Predominantly millet growing districts
Jalgaon	Raigad	Nashik
Jalna	Sindhudurg	Dhule
Nanded	Bhandara	Parbhani
Amravati	Gadchiroli	Osmanabad
Yavatmal	Thane	Latur
Wardha	Ratnagiri	Aurangabad
Akola	Kolhapur	Beed
Buldhana	Chandrapur	Ahmednagar
		Pune
		Satara
		Sangli
		Nagpur
		Solapur

4.114 The broad classificaton of the districts has been made on the basis of the percentage of normal area under the crop (or group of crops) to the gross cropped area of the district given in Table No.10 in the Appendix-II. If the value of the percentage was highest for a crop in a district then that district was reckoned as one predominantly growing that crop or group of crops.

4.115 It is seen that in the first category of districts, the percentage area under foodgrains showed a fairly narrow range of variation among the different size classes, particularly in districts of Bhandara, Akola and Amravati. In the district of Jalgaon the area under foodgrains goes on declining with the increase in the size class. In Yavatmal and Wardha districts this declining is found in the group upto 50 hectares. In coastal districts of Thane, Ratnagiri and Sindhudurg which are predominantly paddy growing districts Kolhapur andChandrapurdistricts it shows a declining trend with the increase in the size of holdings. In case of Raigad district the decline was small upto the size of 20 hectares and thereafter it showed a decline in the size class and a slight increase in the size class of 50 hectares and above. The percentage area under foodgrains remains practically the same in all the size classes in Bhandara district.

4.116 In the millet growing districts, the pattern of variation differred considerably from district to district. The proportionate area under foodgrains in the districts of Aurangabad, Dhule, Ahmednagar and Solapur showed little variation among the different size classes. It showed upward trend in Sangli district with the increase in the size of holdings. The declining trend was observed in the above size class of holdings in the district of Pune, Satara and Nagpur.

4.117 It can therefore, be concluded that on the whole, no consistent trend is noticed to confirm or reject completely the expectations stated earlier. On the other hand, different types of phenomenon were noticed in the different categories of districts listed above. These somewhat unusual findings have been obtained which suggest that in the districts where the cash crops have been grown on a relatively large scale, the proportion of area devoted to foodgrains did not seem to differ appreciably for the different size classes. But in the districts in which foodgrains crops were grown predominantly, the small holders devoted relatively larger proportion of area to foodgrains than the big farmers in most of the districts. Almost similar type of finding was noticed in the last Census also.

An analysis of the above type carried out for the individual main crops is discussed below.

Jowar

4.118 The proportionate area under jowar in the size classes of holdings in the individual district are given in Table No.16 of Appendix-II. The proportionate area was practically the same in the districts of Aurangabad, Jalna, Beed, Nanded, Osmanabad and Chandrapur. It showed a downward trend with the increase in the size of holdings in the districts of Jalgaon, Satara, Kolhapur, Parbhani, Latur, Buldhana, Amravati and Nagpur. In Ahmednagar district, however, it showed slight upward trend in case of holdings upto 20 hectares.

Rice

4.119 As seen from Table No.17 of Appendix-II, Thane, Raigad, Ratnagiri, Sindhudurg, Bhandara, Chandrapur and Gadchiroli are the important rice growing districts and to some extent Kolhapur district also. It is observed that the proportionate area under the crop in different size groups showed a downward trend in all the districts with the increase in the size

class of holdings. The range of variation of the proportionate area under rice in the different size classes was remarkebly wide. The range between the highest and lowest being 78 per cent to little above 20 per cent in Sindhudurg district, 65 per cent to 17.5 per cent in Thane district, nearly 90 per cent to 57 per cent in Raigad, 31 per cent to 12 per cent in Kolhapur, over 71 per cent to 44 per cent in Bhandara district, 51 per cent to nearly 13 per cent in Chandrapur district and about 71 per cent to 40 per cent in Gadchiroli.

Nagli

4.120 Nagli is an inferior millet crop grown mostly on the inferior lands in the 4 districts of Konkan region and Kolhapur district also. The analysis of the Census data shows that the farmers having small holdings devoted less proportionate area to nagli, while those with bigger holdings particularly in Thane and Raigad and Sindhudurg districts allotted proportionately larger area to the crop as can be seen from the Table No.18 of Appendix-II.

Fodder crop

4.121 It is observed that in the 2 districts of Konkan region namely Thane and Ratnagiri and also in the district of Pune and Kolhapur fodder crop is also grown on the comparatively large scale. Its proportion to the total cropped area showed increasing trend as the size of holdings increased in Thane, Ratnagiri and Kolhapur districts. Similar trend was also observed in the districts of Raigad and Pune also.

Bajri

4.122 The size classwise percentage area under bajri is presented in Table No.20 of Appendix-II for the 10 districts where it is grown on a relatively large scale. It is seen that the proportionate area under the crop in the different size classes was practically the same in Nashik, Dhule, Jalgaon, Solapur and Aurangabad districts. It showed a slight downward trend in Pune district and upward trend in Satara and Sangli district with the increased in the size of holdings (upto 20 hectares in case of Satara district). In Ahmednagar district also the declining trend was observed but it was quite low.

Wheat

4.123 The size-class wise percentage under wheat is shown in Table No.21 of Appendix-II for majority of wheat growing districts. It is seen that the variation in most of thedistricts is of moderate order, upto size class of 20 hectares and declining trend is observed in the districts of Nashik, Jalgaon, Ahmednagar, Pune, Aurangabad, Parbhani, Osmanabad (upto 50 hectares) Latur (upto 50 hectares). An upward trend is observed in the districts of Bhandara, Chandrapur and Nagpur. Similar trend is also observed in Amravati but the variation is small.

Cotton

4.124 Maharashtra's most important commercial crop is cotton. At the State level 14 per cent of the cropped area was devoted to cotton. Within the individual districts, it occupied 27 per cent to over 49 per cent of the cropped area in the districts of Parbhani, Buldhana, Akola, Amravati, Yavatmal and Wardha as can be seen from the Table No.22 of Appendix-II. The crop occupied more than one-fifth of the cropped area in Jalgaon district also.

4.125 It can be seen that in majority of the important cotton growing districts, the percentage area under the crop in the different size groups of holdings did not show much variation thereby indicating that the farmers with holdings of different size class had devoted

practically the same proportionate area to this cash crop. A slight upward trend in the percentage area under cotton was noticed in Jalgaon district with the increased in the size of holdings upto 20 hectares.

Groundnut

4.126 Groundnut is another important commercial crop grown in the State occupying hardly 4 per cent of the gross cropped area. The size classwise percentage of area under the groundnut with respect to the total cropped area for the important groundnut growing districts is presented in Table No.23 of Appendix-II. In the district of Dhule and Kolhapur more than 12 per cent of the gross cropped area was devoted to the groundnut cultivation.

It is seen that the proportionate area under the crop showed little variation in majority of the districts. An downward trend was observed with the increase in the size of holdings was noticed in the districts of Sangli and Osmanabad.

Comparison of official statistics with those of Census in respect of important crops

4.127 As stated in Chapter III under Census data on the land use and area under crops were collected from the basic village records *viz.* Khasra *i.e.* Village Form No.VII-XII which also formed the basis for the preparation of the official statistics published in the Annual Season and Crop Report. Hence the Census data afforded a unique opportunity to compare the Census figures of certain important area statistics with those published in the Annual Season and Crop Report, particularly since these were obtained independently by two different procedures, one by enumeration of the area under items from the holdingwise census data in all the villages and another by aggregation of parcelwise data from the village records.

4.128 To enable such a comparative study, the CENSUS figures and official statistics pertaining to the State total net sown area and gross cropped area together with that under certain selected crops are given in Table No.4.30. Before studying the two sets of figures., it will be pertinent to mention here that Census figures of area for crops like sugarcane are expected to be lower to some extent, because of the higher percentage of irrigation to this crop.

4.129 It is seen that Table No.4.30 that there was a fair agreement between the two sets of figures in case of the principal crops barring gram to less important oilseed crops like Sesamum, Sunflower and Linseed. Similar agreement was also noticed in case of groups of crops like cereals, foodgrains and foodcrops. The wider disparity between the two sets of figures in respect of total oilseeds and total pulses is attributed to that of gram and oilseed crops mentioned above.

4.130 In case of irrigated area under the individual crops and groups of crops the difference in the two sets of area figures is much wider with that of Census figures being generally on the lower side.

Though the source of data for the two sets of figures is the village record, the difference has occured because of the difference in the method of compiling figures in the two sets.

4.131 A Sample study was undertaken to find out the reasons for the difference in the two sets of figures which revealed that the data are attributed mainly to the fact that in 'Season and Crop Report' the figures are compiled for different items at village level and all the operations

are carried out manually. The difference is also attributed to the fact that columns in the Season and Crop Reports do not always tally with the information available in the village records, and the same is therefore, required to be derived from the respective columns. In addition, manual errors in aggregating and thereby recording different items in the respective columns are also responsible for the difference to some extent. More detailed examination of the factors responsible for the same is necessary at the village level.

TABLE NO. 4.30

Area under different crops (1980-81) of Maharashtra based on Agricultural Census and official statistics

(Area in '000' hectares)

Item	Total area *i.e.* Irrigated/Unirrigated		Per cent (-) or (+) over Season & Crop report	Irrigated Area		Per cent difference (-) or (+) over Season & Crop Report
	Agril. Census estimates	Official Statistics		Agril. Census estimates	Official statistics	
Net sown area ..	177.04	180.15	(-) 1.7	14.36	18.15	(-) 20.9

CHAPTER V - SUGGESTIONS FOR FUTURE CENSUSES BASED ON THE EXPERIENCE OF THE LAST THREE CENSUSES

Introduction

5.1 As the agricultural census appears to have become a regular activity of national interest and importance to be repeated at periodical intervals, a stage has now been reached when necessary measures have to be taken for putting this activity on a systematic and regular basis. An attempt has been made in this chapter to offer a few importrant suggestions in this regard in the light of the experiences gained in the last three censuses.

Need for legislation on Agricultural Census

5.2 In some of the States at least (including Maharashtra), considerable opposition was faced from the patwari agency in attending to the field work of the agricultural census. The major argument put forward in this regard was that the agricultural census related to agriculture and hence the staff of the Agriculture Department should carry out the field-work. In reality however, the census data are to be compiled by retabulation of the information already contained in the village revenue records (particularly the khataoni and Khasra registers) which are compiled and maintained by the patwaris (or talathis). These village records are maintained primarily for the purpose of revenue administration and this duty is a part of their normal and regular functions. Moreover, being the village revenue officer in charge of land revenue collection and record of rights, the patwari has a more intimate knowledge of the crops grown, irrigation, *etc*. and a better acquaintance with the actual tillers of land. Hence the most appropriate field agency for carrying out the agricultural census is the patwari agency. This has also been emphasised by the Technical Committee For Co-ordination of Agricultural Statistics appointed by the Government of India in 1949. In fact, the census itself needs to be renamed as "Land Holding Census." At present, there is no mention about such an activity in the Revenue Manual, though in Marathwada region, it was being carried out annually in some form or the other prior to the reorganization of the States.

In view of what is stated above, the need for having an Agricultural Census Act hardly required any further emphasis.

Suggestions for streamlining the work

5.3 While undertaking any agricultural census in future the following steps, if taken, will go a long way to improve the timeliness and quality of the census data :-

(i) Necessary legislative measures need to be introduced for marking the conduct of the census an obligatory functiuon of the revenue agency, forming a part of their normal duties. The census may be renamed as 'Land Holdings Census'.

(ii) Provision has to be made in the Revenue Manual giving necessary particulars of the census, nature of work and duties involved and making particular mention that the fieldwork should be carried out by the patwaris. In a similar manner, specific responsibilities should be assigned to the higher revenue officer at the tahsil, sub-divisional and district levels. More specifically, the district Collector can be entrusted with the responsibility of getting the census completed satisfactorily and in time. The progress of the census has to be reviewed at the divisional level every month and the timely completion of the work ensured.

(iii) It is necessary to ensure the satisfactory conduct of the census, timely completion of the fieldwork and availability of finalised census data free from discrepancies and deficiencies, *etc.* For this purpose, it will be necessary to make available the services of the statistical agencies dealing with the agricultural statistics, directly or indirectly, during the period of the census. These agencies need to be made specifically responsible for the following items of work :-

(a) Training the field staff.
(b) Giving technical guidance.
(c) Supervising the fieldwork and removing the technical lapses.
(d) Scrutiny and finalisation of the census data at the field level after applying all the cross checks so as to ensure the completeness of the coverage, consistancy of the data on all the relevant items and checking the correctness of the aggregations at the village level.
(e) Reviewing the progress of the census work every fortnight and taking steps for the timely completion of the work in (d) above.

Need for Co-ordination at Different levels

5.4 The conduct of the census involves multiple agencies in the district working under the control of different dapartments. Hence effective co-ordination and control are necessary. For this purpose, close co-ordination has to be effectively organised at the district, divisional and State levels.

Advance Planning

5.5 Any large scale nation-wide census operation needs a good deal of advance planning and action. In particular, the preliminary arrangement including formulation and printing of the booklet of instructions for the fieldwork, supervision, schedules for collecting data, *etc.* should be initiated at least one year in advance.

Further analysis of census data

5.6 Having carried out an agricultural census, either on complete enumeration or sample basis, after a good deal of effort, expenditure and time, it would be very helpful if post-census studies are organised to examine the lacuna , if any, and such other aspects in the agricultural statistics being collected at present and also to effect improvements wherever needed. It would be worthwhile to analyse the holding-wise data collected in the census, so as to bring out notes and technical bulletines, which will be useful to the policy makers, extension workers, research institutions, *etc.* For this purpose, it would be helpful if a small cell is created in the State Statistical Organisation concerned with the census.

CHAPTER VI - AGRICULTURAL CENSUS REPORT OF SCHEDULED CASTES AND SCHEDULED TRIBES HOLDINGS

Introduction

6.1 As already stated that in Agricultural Census 1980-81 separate enumeration of the Scheduled Castes and Scheduled Tribes holdings was carried out and the results obtained are presented in separate Tables 1 to 5 for each Scheduled Castes and Scheduled Tribes at the end of Part-II of the Census report.

Scheduled castes Holdings

6.2 The results for the same are summarised below. Out of total number of 68.62 lakh holdings, 4.67 lakh (about 6.8 per cent of the total holdings) belonged to the Scheduled Castes and 4.13 lakh holdings (about 6 per cent) belonged to the Scheduled Tribes of the State total holdings. Out of 4.67 lakh Scheduled Castes holdings, individual holdings were 4.39 lakh *i.e.* more than 94 per cent and the Joint holdings were 0.28 lakh *i.e.* about 6 per cent. Nearly 80 per cent of holdings were of the size below 3 hectares. The total area of Scheduled Castes holdings was 9.56 lakh hectares which amounted to 4.5 per cent of the total area of the State holdings. The average size of holdings for the Scheduled Castes was 2.05 hectares which was less by 1.06 hectares as compared to the State average size of holdings. As was observed at the State level total holdings, majority of the holdings were wholly owned by Scheduled castes holders. These amounted to 4.59 lakh *i.e.* 98.29 per cent of the total scheduled castes holdings. The area under such category being 97.37 per cent of the total area of scheduled castes holdings. The wholly rented holdings amounted to only 0.4 per cent of the total scheduled castes holdings. The partly owned and partly rented holdings were 1.4 per cent of the total scheduled castes holdings. However, in such holdings also, the rented area was less than 44 per cent. The net cultivated area in scheduled castes holdings amounted to 8.36 lakh hectares or 87.4 per cent of the total area under scheduled castes holdings. The uncultivated lands and lands not available for cultivatiuon, amounted to nearly 8 and 4.6 per cent respectively. So far as irrigation status is concerned, the total number of scheduled castes holdings receiving irrigation was little over 69,000 *i.e.* little less than 15 per cent of the total scheduled castes holdings. The total irrigated area amouted to 5.4 per cent of the total area of scheduled casts holdings. The total unirrigated area was as high as 93.5 per cent in scheduled castes holdings. The number of holdings receiving irrigation from tanks being more than 16,000 covering an area of over 15,300 hectares. The well irrigation was received by 22,300 holdings covering over 15,700 hectares of area. The number of holdings under canal irrigation was 20,600 covering an area of nearly 16,100 hectares. These three important sources of irrigation *viz.* wells, canals and tanks covered 59,300 out 69,200 *i.e.* 85.7 per cent of scheduled castes holdings receiving irrigation. The total irrigated area was 51,400 hectares out of which 47,100 hectares *i.e* 91.6 per cent was irrigated by the above three sources. This indicates that the area and number of holdings using other sources of irrigation was negligible.

Scheduled Tribes Holdings

6.3 As already stated above, about 6 per cent of the total State holdings belonged to scheduled tribes. The total area under these holdings was also 6.1 per cent of the total State holdings area. The average size of scheduled tribes holdings was slightly higher than the State average size being 3.14 hectares. More than 92 per cent of the scheduled tribes holdings and

that over 90 per cent of the area was under individual holdings. Joint holdings were less than 8 per cent in number and area under them was also less than 10 per cent. As regards tenancy status, nearly 97 per cent of the scheduled tribes holdings were wholly owned. The partly owned and partly rented were little above 2 per cent and wholly rented holdings were little above 1 per cent of the total Scheduled Tribes holdings. The overall rented area taken together in the wholly rented and rented area in partly owned holdings was only 2.6 per cent. The net cultivated area amounted to 88 per cent of the total area under scheduled tribes holdings. Non-cultivated land and land not available for cultivation was 6.7 and 5.2 per cent respectively, of the scheduled tribes holdings. The total number of scheduled tribes holdings receiving irrigation was 33,700 *i.e.* 8.2 per cent of the scheduled tribes holdings and the irrigated area thereunder was 34,100 hectares, amounting to only 2.6 per cent of the total area of scheduled tribes holdings.

In the scheduled tribes holdings, tank irrigation was received by 14,700 holdings and the area irrigatged was 16,800 hectares. Well irrigation was available in 8,900 holdings covering an area of 6,800 hectares. Canal irrigation was available to 8,300 holdings and area irrigated by canals in these holdings was 7,900 hectares. It is seen that 94 per cent of the irrigated holdings and 98 per cent of the irrigated area received irrigation from the above 3 sources *viz.* Tanks, Wells and Canals.

APPENDIX - I

Districtwise distribution of Population in 1971 and 1981

(Figures in '000')

EYPLANATORY NOTE ON THE STATISTICAL TABLES

The date collected under the Agricultural Census have been summarised in six tables separately for each district and the State in accordance with the format specified by the Government of India. For proper understanding of these tables, it is necessary to explain in brief the background and the contents of each table, as also to Clarify the meaning of certain figures appearing in the tables. Accordingly, a brief description of the contents and the clarification of the certain figures is given below.

DESCRIPTION AND BACKGROUND OF THE CONTENTS OF EACH TABLE

The results of Agricultural Census are presented in tables I to VI in this part. These results are based on the data of complete ccnsus *i. e.* complete enumeratuion of all the land holdings in the State. At State level, Table I to V have been presented separately for Scheduled Castes and Scheduled Tribes holdings.

TABLE – I

This table gives the number of operational holdings and their area in each of the 14 size classes based on complete enumeration of all holdings in the State. It also shows the split up of the holdings into individual, joint and institutional holdings and the area thereunder.

TABLE – II

It gives the number and area of operational holdings classified according to tenure and tenancy in each size class. A holding whose entire area was owned by the operator is classified as 'wholly owned' holding. A holing taken entirely on lease or rent is classified as 'wholly rented' holding. If part of a holding was taken on lease and the rest was owned, it has been classified as 'partly owned and partly rented' holding.

TABLE – III

This table shows the distribution of the area under different items of land-use, in each of the 14 size classes according to the following land-use classification. (i) Net sown area, (ii) Current fallow, (iii) Net cultivated area (*i.e.*, net sown area + area under current fallow), (iv) other uncultivated land, (v) Other fallows, (vi) Culturable waste, (vii) Not available for cultivation.

TABLE – IV

This table gives for each size class, the number and area of operational holdings classified according to three categories viz. 'wholly irrigated', 'wholly unirrigated' and 'partly irrigated and partly unirrigated' holdings. A wholly irrigated holding is one whose net sown area was entirely irrigated. When the net sown area of a holding was all unirrigated it has been termed as a 'wholly unirrigated' holding. If the land under crop in a holding was partly irrigated and the rest unirrigated, it has been classified as a 'partly irrigated and unirrigated' holding. This table also gives the number of irrigated holdings and net irrigated area, taking into account the first and third categories of holdings and their area irrigated.

TABLE – V

This table gives the number of operational holdings receiving irrigation and area irrigated by different sources of irrigation. It also furnishes the informaton in respect of exclusive number of arrigated holdings *i. e.* holding having one or more sources of irrigation but counted only once.

TABLE – VI

This table gives the irrigated, unirrigated and total area under individual crop which were covered by the Agricultural Census alongwith the holdings growing a crop.

CLARIFICATION REGARDING CERTAIN FIGURES

(i) Limits of Size Class

The value of the upper limit of each size class has been included in the next higher size of class.

(ii) Cases of 'Nil' Number of Holdings and Area

In case of certain items of characteristics which occur rarely in few size groups or even at the tahsil or the district level, the values were very low in magnitude and hence they have been rounded to 'nil' in these cases. Consequently, even though the number of holdings has been reported in such size groups, it is likely that the corresponding area might have been reported 'Nil' or *vice–versa* due to their very low magnitude. Further, due to occurence of such cases, the individual figures may not add up to the corresponding aggregates.

EFFECT OF ROUNDING ON CORRESPONDING TOTAL

The total operated area in column 4 of the Census Tables may not agree with the corresponding totals of these items given under categorywise distribution of these figures, as they have been recorded to the nearest integer at the size class level as well as at the various other levels. For similar reason, size groupwise area figures given in Table VI may not add up to the corresponding total cropped area given in columns 5, 6 and 7 of that table. This disparity may become more in case of smaller size groups of holdings.

EFFECT OF REPETITION

The number of holdings growing the individual crop may not also add up to the total number of holdings given in Column 3 of Table VI, because the same holding growing two or more crops, would be repeated while counting for the individual crop.

CHANGE IN THE NUMBER OF THE DISTRICTS

Four new districts have now been added *viz.* Sindhudurg (part of the erstwhile Ratnagiri district), (2) Jalna (part of the erstwhile Aurangabad and Parbhani districts), (3) Latur (part of the erstwhile Osmanabad district) and Gadchiroli (part of the erstwhile Chandrapur district).
